# Warning/Caution/Note Definition

The words **WARNING**, **CAUTION**, and **NOTE** carry special meanings and should be carefully reviewed.

## **WARNING**

Alerts the reader about a situation which, if not avoided, could result in death or serious injury. It may also describe potential serious adverse reactions and safety hazards.

## **CAUTION**

Alerts the reader of a potentially hazardous situation which, if not avoided, may result in minor or moderate injury to the user or patient or damage to the product or other property. This includes special care necessary for the safe and effective use of the device and the care necessary to avoid damage to a device that may occur as a result of use or misuse.

**Note** - Provides special information to make maintenance easier or important instructions clearer.

## Summary of safety precautions

Carefully read and strictly follow the warnings and cautions listed on this page. Service only by qualified personnel.

---

### **WARNING**

- Always use caution when you remove the rue clip and clevis pin to avoid possible injury or product damage. The bed will lean toward the foot end when you remove the rue clip and clevis pin from the motor drive tube. A hard stop will prevent excessive tipping.
  - Always keep your fingers clear of moving parts when you activate the Trendelenburg motor to avoid possible injury.
- 

### **CAUTION**

- Always use electrostatic discharge (ESD) protective equipment before you open antistatic bags and service electronic parts.
  - Do not place unprotected circuit boards on the floor.
  - Always hold the bed lift motor before you remove the last motor mounting bolt to avoid possible injury or product damage.
  - Always release the **Foot Down** button immediately if the foot support touches the litter frame or product damage could occur.
  - Always release the **Foot Up** button immediately if the foot support touches the litter frame or product damage could occur.
-

## Introduction for service

This manual assists you with the service of your Stryker product. Read this manual to service this product. This manual does not address the operation of this product. See the Operations Manual for operating and use instructions. To view your Operations Manual online, see <https://techweb.stryker.com/>.

## Expected service life

The Birthing Bed has a 10 year expected service life under normal use, conditions, and with appropriate periodic maintenance.

The Birthing Bed mattress has a two year expected service life under normal use, conditions, and with appropriate periodic maintenance.

## Contact information

Contact Stryker Customer Service or Technical Support at: 1-800-327-0770.

Stryker Medical  
3800 E. Centre Avenue  
Portage, MI 49002  
USA

To view your operations or maintenance manual online, see <https://techweb.stryker.com/>.

Have the serial number (A) of your Stryker product available when calling Stryker Customer Service or Technical Support. Include the serial number in all written communication.

## Serial number location

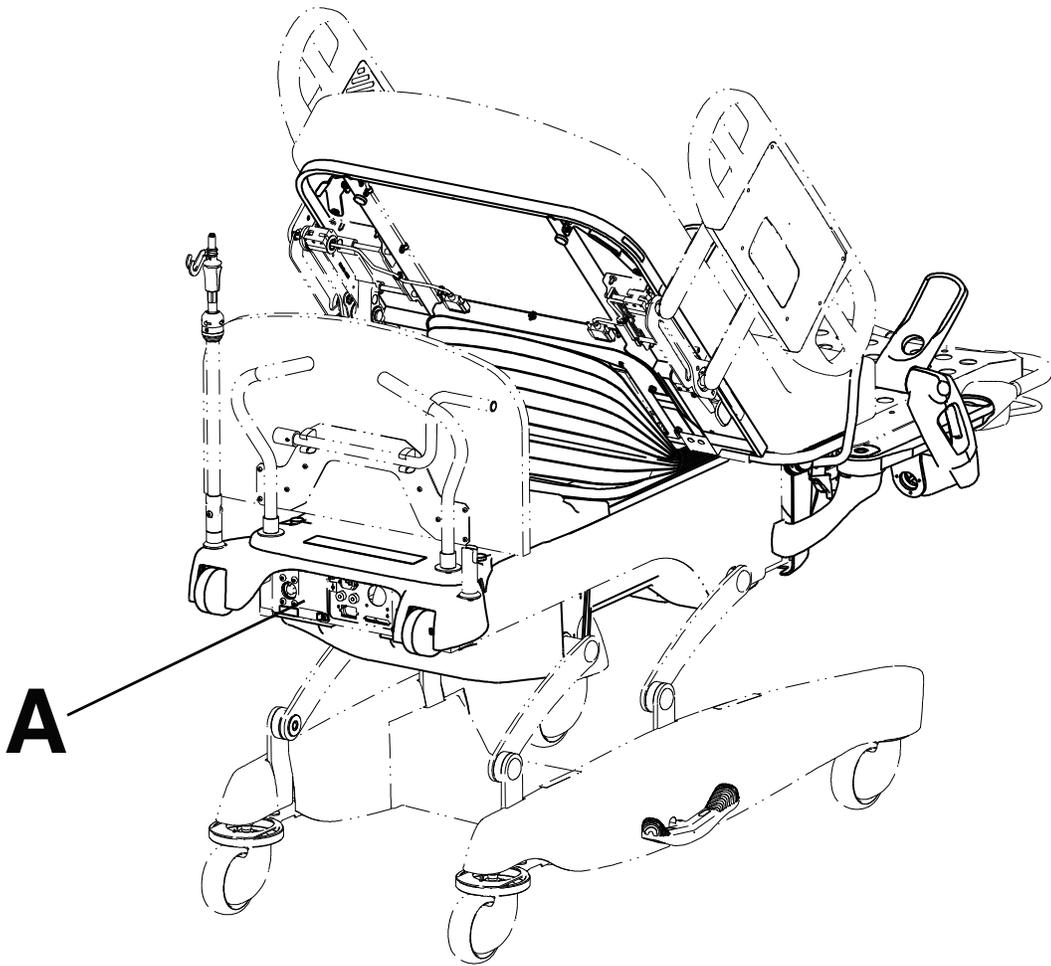

Figure 1 – Serial number location

# Preventive maintenance

At a minimum, check all items listed during annual preventive maintenance for all Stryker Medical products. You may need to perform preventive maintenance checks more frequently based on your level of product usage.

Remove product from service before performing preventive maintenance. Preventive maintenance should only be performed by trained or certified personnel.

**Note** - Clean and disinfect the exterior of the mattress before inspection, if applicable.

Inspect the following items:

- \_\_\_\_\_ All welds and all fasteners are secure
- \_\_\_\_\_ Tubing or sheet metal for bends or breaks
- \_\_\_\_\_ Casters are free of debris
- \_\_\_\_\_ Casters are secure and swivel
- \_\_\_\_\_ Casters lock securely by depressing the brake pedal
- \_\_\_\_\_ Steer caster latches
- \_\_\_\_\_ Siderails move and latch
- \_\_\_\_\_ Fowler operates
- \_\_\_\_\_ Fowler (backrest) slide operates
- \_\_\_\_\_ Litter Up/Down operates
- \_\_\_\_\_ Foot section operates
- \_\_\_\_\_ Footrests operate
- \_\_\_\_\_ Trend operates
- \_\_\_\_\_ IV pole is intact and operates
- \_\_\_\_\_ Mattress cover after each use
- \_\_\_\_\_ Mattress cover for rips or cracks
- \_\_\_\_\_ Headboard and siderail panels for cracks or splits
- \_\_\_\_\_ All covers are not damaged and are not producing sharp edges
- \_\_\_\_\_ Night light operates
- \_\_\_\_\_ CPR release operates
- \_\_\_\_\_ All siderail motion functionality
- \_\_\_\_\_ Nurse call functionality option
- \_\_\_\_\_ 9V Nurse call battery option (replace annually)
- \_\_\_\_\_ Lubricate where required
- \_\_\_\_\_ Pendant for any physical damage
- \_\_\_\_\_ Power cord not frayed
- \_\_\_\_\_ Cables not worn or pinched
- \_\_\_\_\_ All electrical connections tight
- \_\_\_\_\_ All grounds secure to the frame
- \_\_\_\_\_ Ground impedance not more than 100 mΩ (milliohms)
- \_\_\_\_\_ Current leakage not more than 300 μA (microamps)
- \_\_\_\_\_ Ground chains are clean, intact, and have at least two links touching the floor
- \_\_\_\_\_ Enclosure is free from wear, tear, stresses and mechanical damage
- \_\_\_\_\_ No rust or corrosion of parts

\_\_\_\_\_ Labels for legibility, proper adherence, and integrity

# Troubleshooting

Problem	Possible cause	Solution
No power	The product power cord is not plugged into a hospital grade wall outlet	Plug the product power cord into a hospital grade wall outlet.
	A circuit breaker is tripped	Push the circuit breaker in to reset.
	Low voltage or no voltage	<ol style="list-style-type: none"> <li>1. Check for 120 VAC at J1 on the power supply, pins 1 and 2.</li> <li>2. Check for DC voltages on J2 (pins 1, 2, 3, and 6) on power supply. See section for power supply voltage test points.               <ol style="list-style-type: none"> <li>2.1. If voltage is present, check connector W on the CPU board and check for the same DC voltages. If OK, go to step 2.4.</li> <li>2.2. If voltage is not present, unplug connector W on the CPU board and recheck for DC voltages at J2 on the power supply.                   <ol style="list-style-type: none"> <li>2.2.1. If voltages come back, reconnect cable W to the CPU board, and go to step 2.3.</li> <li>2.2.2. If DC voltage does not come back, replace the power supply.</li> </ol> </li> <li>2.3. Unplug all connectors except O and W from the CPU board and recheck voltages on connector W.                   <ol style="list-style-type: none"> <li>2.3.1. If DC voltages come back, plug the cable connections back in until problem comes back, isolate the problem to a component or assembly.</li> <li>2.3.2. If DC voltages do not come back, replace the CPU board.</li> </ol> </li> <li>2.4. Check for 120 VAC at connector O on the CPU board. If voltage is present, replace the CPU board.</li> </ol> </li> </ol>

Problem	Possible cause	Solution
No bed down motion	No two-pin shunt present	<ol style="list-style-type: none"> <li>1. Enter Diagnostics.</li> <li>2. Press the bed down button.</li> <li>3. If motion is not present, make sure there is a two-pin shunt present on connector Z, pins 1 and 2.</li> <li>4. If no shunt is present, install a shunt (0059-137-000).</li> </ol>
	Potentiometer limits were reset	<ol style="list-style-type: none"> <li>1. Enter Diagnostics.</li> <li>2. Press the bed down button.</li> <li>3. If motion is present, re-burn the lift potentiometer limits. See <i>Lift potentiometer burn-in procedure</i> (page 46).</li> </ol>
	Low voltage or no voltage	<ol style="list-style-type: none"> <li>1. Check for 5 VDC on TP 10 on the CPU board (reference the ground test point) while you press the bed down button. <ol style="list-style-type: none"> <li>1.1. If 5 VDC is present, proceed to the next step.</li> <li>1.2. If 5 VDC is not present, replace CPU board.</li> </ol> </li> <li>2. Check for 120 VAC power on connector N, pin 1 white and pin 6 black of the CPU board while you press the bed down button. <ol style="list-style-type: none"> <li>2.1. If voltage is present at motor, check capacitor and motor.</li> <li>2.2. If voltage is not present, replace CPU board.</li> </ol> </li> </ol>
No bed up motion	Potentiometer limits were reset	<ol style="list-style-type: none"> <li>1. Enter Diagnostics.</li> <li>2. Press the bed up button.</li> <li>3. If motion is present, re-burn the lift potentiometer limits. See <i>Lift potentiometer burn-in procedure</i> (page 46).</li> </ol>

Problem	Possible cause	Solution
No bed up motion	Low voltage or no voltage	<ol style="list-style-type: none"> <li>1. Check for 5 VDC on TP 9 on the CPU board (reference the ground test point) while you press the bed up button.               <ol style="list-style-type: none"> <li>1.1. If 5 VDC is present, proceed to the next step.</li> <li>1.2. If 5 VDC is not present, replace CPU board.</li> </ol> </li> <li>2. Check for 120 VAC power on connector N, pin 1 white and pin 3 green of the CPU board while you press the bed up button.               <ol style="list-style-type: none"> <li>2.1. If voltage is not present, replace CPU board.</li> <li>2.2. If voltage is present at motor, check capacitor and motor.</li> </ol> </li> </ol>
No Fowler down motion	Potentiometer limits were reset	<ol style="list-style-type: none"> <li>1. Enter Diagnostics.</li> <li>2. Press the Fowler down button.</li> <li>3. If motion is present, re-burn the lift potentiometer limits. See <i>Fowler potentiometer burn-in procedure</i> (page 46).</li> </ol>
	Low voltage or no voltage	<ol style="list-style-type: none"> <li>1. Check for 5 VDC on TP 5 on the CPU board (reference the ground test point) while you press the Fowler down button.               <ol style="list-style-type: none"> <li>1.1. If 5 VDC is present, proceed to the next step.</li> <li>1.2. If 5 VDC is not present, replace CPU board.</li> </ol> </li> <li>2. Check for 120 VAC power on connector CC, pin 2 green and pin 3 white of the CPU board while you press the Fowler down button.               <ol style="list-style-type: none"> <li>2.1. If 120 VAC is present, check the capacitor and motor.</li> <li>2.2. If voltage is not present, replace CPU board.</li> </ol> </li> </ol>
No Fowler up motion	Potentiometer limits were reset	<ol style="list-style-type: none"> <li>1. Enter Diagnostics.</li> <li>2. Press the Fowler up button.</li> <li>3. If motion is present, re-burn the lift potentiometer limits. See <i>Fowler potentiometer burn-in procedure</i> (page 46).</li> </ol>

Problem	Possible cause	Solution
No Fowler up motion	Low voltage or no voltage	<ol style="list-style-type: none"> <li>1. Check for 5 VDC on TP 6 on the CPU board (reference the ground test point) while you press the Fowler up button.               <ol style="list-style-type: none"> <li>1.1. If 5 VDC is present, proceed to the next step.</li> <li>1.2. If 5 VDC is not present, replace CPU board.</li> </ol> </li> <li>2. Check for 120 VAC power on connector CC, pin 1 black and pin 3 white of the CPU board while you press the Fowler up button.               <ol style="list-style-type: none"> <li>2.1. If 120 VAC is present, check the capacitor and motor.</li> <li>2.2. If voltage is not present, replace CPU board.</li> </ol> </li> </ol>
No foot down motion	Potentiometer limits were reset	<ol style="list-style-type: none"> <li>1. Enter Diagnostics.</li> <li>2. Press the foot down button.</li> <li>3. If motion is present, re-burn the lift potentiometer limits. See <i>Fowler potentiometer burn-in procedure</i> (page 46).</li> </ol>

Problem	Possible cause	Solution
No foot down motion	Low voltage or no voltage	<ol style="list-style-type: none"> <li>1. Check for 5 VDC on J32 (Z) on the CPU board between pin 1 black and pin 5 orange while you press the foot down button. <ol style="list-style-type: none"> <li>1.1. If voltage is present, proceed to the next step.</li> <li>1.2. If voltage is not present, listen for the safety relay click on the CPU board when you press the foot down button. <ol style="list-style-type: none"> <li>1.2.1. If you do not hear a click, replace the CPU board.</li> <li>1.2.2. If it does click, isolate the siderails and inspect the siderail boards and cabling.</li> </ol> </li> </ol> </li> <li>2. Check for 5 VDC on J4 (G) on the foot power board between pin 1 (black) and pin 5 (orange) while pushing the foot down button. <ol style="list-style-type: none"> <li>2.1. If voltage is present, proceed to the next step.</li> <li>2.2. If voltage is not present, replace the cable between the CPU and the foot power board.</li> </ol> </li> <li>3. Check for 120 VAC on J6 (F) on the foot power board between pin 2 red and pin 3 white while pushing the foot down button. <ol style="list-style-type: none"> <li>3.1. If 120 VAC is present, check the capacitor and motor.</li> <li>3.2. If voltage is not present, replace the foot power board.</li> </ol> </li> </ol>
No foot up motion	Potentiometer limits were reset	<ol style="list-style-type: none"> <li>1. Enter Diagnostics.</li> <li>2. Press the foot up button.</li> <li>3. If motion is present, re-burn the lift potentiometer limits. See <i>Fowler potentiometer burn-in procedure</i> (page 46).</li> </ol>

Problem	Possible cause	Solution
No foot up motion	Low voltage or no voltage	<ol style="list-style-type: none"> <li>1. Check for 5 VDC on J32 (Z) on the CPU board between pin 1 black and pin 4 green while you press the foot up button. <ol style="list-style-type: none"> <li>1.1. If voltage is present, proceed to the next step.</li> <li>1.2. If voltage is not present, listen for the safety relay click on the CPU board when the foot up button is pushed. <ol style="list-style-type: none"> <li>1.2.1. If you do not hear a click, replace the CPU board.</li> <li>1.2.2. If it does click, isolate the siderails and inspect the siderail boards and cabling.</li> </ol> </li> </ol> </li> <li>2. Check for 5 VDC on J4 (G) on the foot power board between pin 1 (black) and pin 4 (green) while pushing the foot up button. <ol style="list-style-type: none"> <li>2.1. If voltage is present, proceed to the next step.</li> <li>2.2. If voltage is not present, replace the foot power board.</li> </ol> </li> <li>3. Check for 120 VAC on J6 (F) on the foot power board between pin 1 black and pin 3 white while pushing the foot up button. <ol style="list-style-type: none"> <li>3.1. If 120 VAC is present, check the capacitor and motor.</li> <li>3.2. If voltage is not present, replace the foot power board.</li> </ol> </li> </ol>

Problem	Possible cause	Solution
No Trendelenburg motion	Low voltage or no voltage	<ol style="list-style-type: none"> <li>1. Check for 5 VDC on TP4 on the CPU board (reference the ground test point) while you press the Trendelenburg button.               <ol style="list-style-type: none"> <li>1.1. If voltage is present, proceed to the next step.</li> <li>1.2. If voltage is not present, listen for the safety relay click on the CPU board when the Trendelenburg button is pushed.                   <ol style="list-style-type: none"> <li>1.2.1. If you do not hear a click, replace the CPU board.</li> <li>1.2.2. If it does click, isolate the siderails and inspect the siderail boards and cabling.</li> </ol> </li> </ol> </li> <li>2. Check for 120 VAC power on connector J50 (GG), pin 1 white and pin 3 black of the CPU board while you press the Trendelenburg button.               <ol style="list-style-type: none"> <li>2.1. If 120 VAC is present, check the capacitor and motor.</li> <li>2.2. If voltage is not present, replace CPU board.</li> </ol> </li> </ol>

Problem	Possible cause	Solution
No reverse Trendelenburg/level motion	Low voltage or no voltage	<ol style="list-style-type: none"> <li>1. Check for 5 VDC on TP4 on the CPU board (reference the ground test point) while you press the level button. <ol style="list-style-type: none"> <li>1.1. If voltage is present, proceed to the next step.</li> <li>1.2. If voltage is not present, listen for the safety relay click on the CPU board when the level button is pushed. <ol style="list-style-type: none"> <li>1.2.1. If you do not hear a click, replace the CPU board.</li> <li>1.2.2. If it does click, isolate the siderails and inspect the siderail boards and cabling.</li> </ol> </li> </ol> </li> <li>2. Check for 120 VAC power on connector J50 (GG), pin 1 white and pin 3 black of the CPU board while you press the level button. <ol style="list-style-type: none"> <li>2.1. If 120 VAC is present, check the capacitor and motor.</li> <li>2.2. If voltage is not present, replace CPU board.</li> </ol> </li> </ol>

Problem	Possible cause	Solution
No Skoocher in motion	Low voltage or no voltage	<ol style="list-style-type: none"> <li>1. Check for 5 VDC on TP8 on the CPU board (reference the ground test point) while you press the Skoocher in button.               <ol style="list-style-type: none"> <li>1.1. If voltage is present, proceed to the next step.</li> <li>1.2. If voltage is not present, listen for the safety relay click on the CPU board when the Skoocher in button is pushed.                   <ol style="list-style-type: none"> <li>1.2.1. If you do not hear a click, replace the CPU board.</li> <li>1.2.2. If it does click, isolate the siderails and inspect the siderail boards and cabling.</li> </ol> </li> </ol> </li> <li>2. Check for 120 VAC power on connector J53 (G), pin 1 white and pin 6 black of the CPU board while you press the Skoocher in button.               <ol style="list-style-type: none"> <li>2.1. If 120 VAC is present, check the capacitor and motor.</li> <li>2.2. If voltage is not present, replace CPU board.</li> </ol> </li> </ol>

Problem	Possible cause	Solution
No Skoocher out motion	Low voltage or no voltage	<ol style="list-style-type: none"> <li>1. Check for 5 VDC on TP7 on the CPU board (reference the ground test point) while you press the Skoocher out button.               <ol style="list-style-type: none"> <li>1.1. If voltage is present, proceed to the next step.</li> <li>1.2. # CPU board - 3002-407-950

Connector location	Cable location	Voltage	Positive lead	Negative lead	Description
J4	G	+5 VDC	Pin 2 white	Pin 1 black	+5 VDC from CPU
J4		12 VDC	Pin 3		DC voltage from CPU
J4		0 VDC without switch 5 VDC with switch	Pin 5 orange		Foot down
J4			Pin 4 green		Foot up
J4			Pin 6 blue		Compressor
J4			Pin 7 white/black		Lumbar soft
J4			Pin 8 red/black		Lumbar firm
J4			Pin 9 green/black		Seat soft
J4			Pin 10 orange/black		Seat firm
J25			W		+12 VDC
J25	+5 VDC	Pin 2 and 3		+5 VDC from power supply	
J25	-12 VDC	Pin 6		Relays and siderails light voltage	
J50	GG	0 VAC without switch	Pin 2 green	Pin 1 white	Reverse Trend
J50			Pin 3 black		Trend
J51	CC	120 VAC with switch	Pin 1 black	Pin 3 white	Fowler up
J51			Pin 2 green		Fowler down
J49	O	120 VAC	Pin 1	Pin 2	Line voltage to bed
J52	N	0 VAC without switch	Pin 3 green	Pin 1 white	Bed lift up
J52			Pin 6 black		Bed lift down
J53	G	120 VAC with switch	Pin 3 green		Skoocher out
J53			Pin 6 black		Skoocher in

# Dip switch configuration

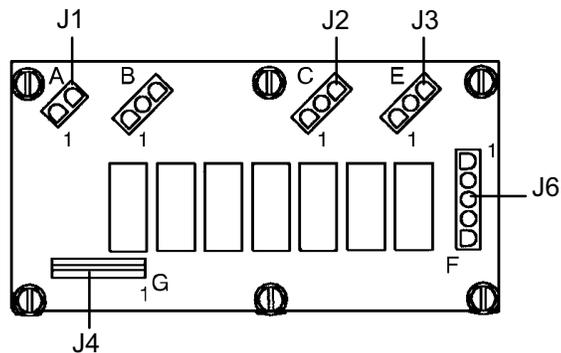

## Power supply - 0059-157-000

Connector location	Voltage	Positive lead	Negative lead
J1	110V	Pin 1	Pin 2
J2	12V	Pin 1	Pin 4 or 5
J2	5V	Pin 2	Pin 4 or 5
J2	5V	Pin 3	Pin 4 or 5
J2	GND	Pin 4	Pin 4 or 5
J2	GND	Pin 5	Pin 4 or 5
J2	-12V	Pin 6	Pin 4 or 5

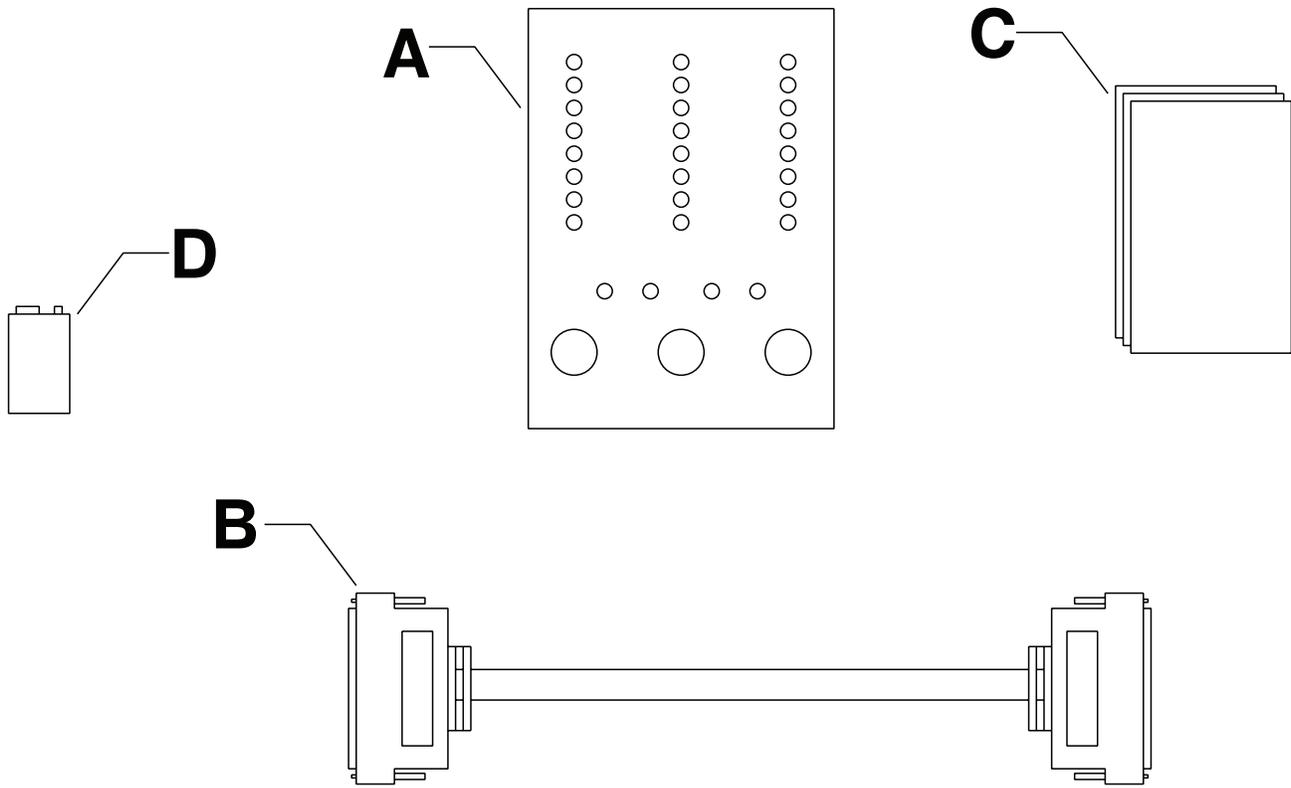

## Foot power board - 4701-080-053

Connector location	Cable location	Voltage	Positive lead	Negative lead	Description
J1	A	120 VAC*	Pin 1	Pin 2	AC line voltage from CPU board
J4	G	+5 VDC	Pin 2 white	Pin 1 black	+5 VDC from CPU
J4		12 VDC	Pin 3		DC voltage from CPU
J4		0 VDC without switch 5 VDC with switch	Pin 5 orange		Foot down
J4			Pin 4 green		Foot up
J4			Pin 6 blue		Compressor
J4			Pin 7 white/black		Lumbar soft
J4			Pin 8 red/black		Lumbar firm
J2		C	0 VAC without switch		Pin 2
J2	120 VAC with switch		Pin 3	Lumbar firm	
J4	G	0 VDC without switch 5 VDC with switch	Pin 9 green/black	Pin 1 black	Seat soft
J3	E	0 VAC without switch 120 VAC with switch	Pin 2	Pin 1	Seat soft
J3			Pin 3		Seat firm
J4	G		Pin 10 orange/black	Pin 1 black	Seat firm
J5	B		Pin 3 black	Pin 1 white	Compressor
J6	F		Pin 2 red	Pin 3 white	Foot down
J6			Pin 1 black		Foot up

\* 120 VAC is present when you press the Fowler slide, lumbar, or seat button.

## Bed communications tester option - 3002-045-700

Item	Number	Name	Quantity
A	3002-045-805	BCT unit	1
B	0059-216-000	37-Pin cable	1
C	3002-045-806	BCT instructions	1
D	3000-303-871	9V alkaline battery	1

**Note** - The bed communications tester will not check Smart TV functions.

### Headwall output configuration

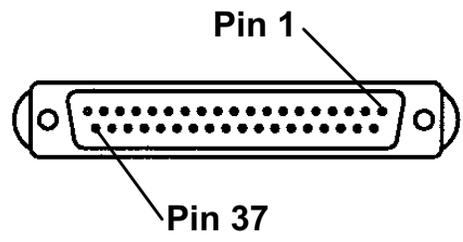

Figure 2 – 37-Pin connector

Pin number	Description
Pin 1	Option 2 common
Pin 2	Read light
Pin 3	Room light
Pin 4	Speaker high
Pin 5	Pot wiper
Pin 6	Radio common
Pin 7	Nurse Call interlock
Pin 8	Audio transfer -
Pin 9	Audio transfer +
Pin 10	Interlock +
Pin 11	Interlock -
Pin 12	Spare
Pin 13	Options 3 common
Pin 14	Pot low common
Pin 15	Pot high common (std.)/audio (STV)
Pin 16	Nurse Answer light +
Pin 17	Option 1 NO/NC
Pin 18	Option 1 common
Pin 19	Nurse Call light +
Pin 20	Option 2 NO/NC
Pin 21	Option 3 NO/NC
Pin 22	Option 3A NO/NC
Pin 23	Option 2A common
Pin 24	Option 2A NO/NC
Pin 25	Nurse Call +
Pin 26	Nurse Call NO/NC
Pin 27	Room/Read light common
Pin 28	Nurse Call light -
Pin 29	Nurse Answer light -
Pin 30	Priority NO/NC
Pin 31	Priority common
Pin 32	Option 3A common
Pin 33	TV - (std.)/data (STV)
Pin 34	TV + (std.)/common (STV)

Pin number	Description
Pin 35	Speaker low common
Pin 36	Audio shield
Pin 37	Radio NO/NC

## Pendant port

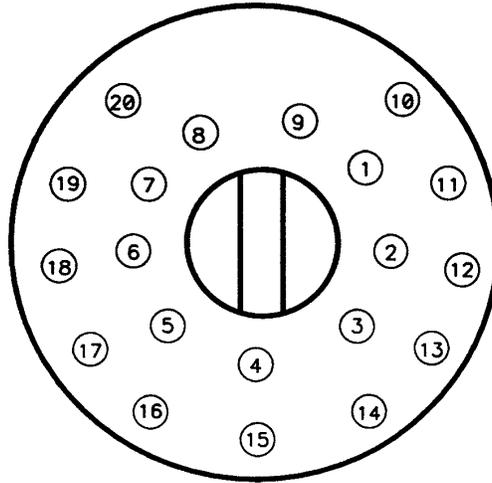

Figure 3 – Pendant port

Port number	Description
1	Scan line
2	Audio -
3	Nurse Call +
4	+5 VDC
5	Scan line
6	Scan line
7	Nurse Call -
8	TV channel up
9	Backlight
10	Audio +
11	Gatch up/Fowler in/foot up/DMS firm
12	Gatch down/Fowler out/foot out/DMS soft
13	Fowler up/Trend in
14	Fowler down/Trend out
15	Audio shield
16	Not used - socket filled

Port number	Description
17	Bed up
18	Ground
19	Read light/bed down
20	Room light

# Service

## Protecting against electrostatic discharge (ESD)

---

### CAUTION

- Always use electrostatic discharge (ESD) protective equipment before you open antistatic bags and service electronic parts.
  - Do not place unprotected circuit boards on the floor.
- 

**Note** - Always ship the circuit boards back to Stryker. Use the antistatic bag that the new board was originally shipped in.

The electronic circuits in the product are completely protected from static electricity damage when factory assembled. Always use adequate static protection when you service the electronic systems of the product. All service personnel must use static protection whenever they touch wires.

Sample antistatic protection equipment includes:

- Antistatic wrist strap
- Grounding plug
- Test lead with a banana plug on one end and an alligator clip on the other end

Make sure that you follow the ESD manufacturer's instructions for appropriate protection against static discharge.

## CPU board replacement - 3002-407-950

### Tools required:

- Phillips screwdriver
- Needle nose pliers
- ESD system

### Procedure:

**Note** - Use ESD protection when necessary. See *Protecting against electrostatic discharge (ESD)* (page 33).

1. Raise the litter and the Fowler backrest to the highest height position.
2. Unplug the bed power cord from the wall outlet.
3. Using a Phillips screwdriver, remove the three Phillips screws that secure the plastic CPU board cover on the electrical pan. Save the screws. Remove and save the cover.
4. Unplug the electrical connectors from the CPU board. Note the locations of the cables so you can connect them to the proper location on the replacement CPU board.
5. Lift up on the CPU board and use the needle nose pliers to unclip the five CPU board stand-off. Remove the CPU board from the stand-off.
6. Install the supplied CPU board on the stand-off and reattach all the electrical connectors. Verify proper connection by matching the letter on the cable to the letter on the CPU board.
7. Match the dip-switch settings on the supplied CPU board to the settings on the old CPU board. Reference the diagram on the bed circuit board for switch settings. Transfer any shunts from the old CPU board to the supplied CPU board. Discard the old CPU board. Reference the burn-in procedures sections.
8. Using a Phillips screwdriver, reinstall the three Phillips screws removed in step 3 that secure the plastic CPU board cover.
9. Plug the power cord into the wall outlet and test the functions of the bed.
10. Verify proper operation before you return the product to service.

## Power supply replacement - 0059-157-000

### Tools required:

- Phillips screwdriver
- Needle nose pliers
- ESD system

### Procedure:

**Note** - Use ESD protection when necessary. See *Protecting against electrostatic discharge (ESD)* (page 33).

1. Raise the litter and the Fowler backrest to the highest height position.
2. Unplug the bed power cord from the wall outlet.
3. Using a Phillips screwdriver, remove the three Phillips screws that secure the plastic CPU board cover on the electrical pan. Save the screws. Remove and save the cover.
4. Unplug the electrical connectors from the CPU board. Note the locations of the cables so you can connect them to the proper location on the replacement CPU board.
5. Lift up on the power supply and use the needle nose pliers to unclip the four power supply stand-off. Remove the power supply from the stand-off and discard.
6. Install the supplied power supply on the stand-off and reattach all the electrical connectors.
7. Using a Phillips screwdriver, reinstall the three Phillips screws removed in step 3 that secure the plastic CPU board cover.
8. Plug the power cord into the wall outlet and test the functions of the bed.
9. Verify proper operation before you return the product to service.

## Foot power board replacement - 4701-080-053

### Tools required:

- Phillips screwdriver
- 5/8" combination wrench
- ESD system

### Procedure:

**Note** - Use ESD protection when necessary. See *Protecting against electrostatic discharge (ESD)* (page 33).

1. Raise the litter and the Fowler backrest to the highest height position.
2. Unplug the bed power cord from the wall outlet.
3. Remove the foot section mattress assembly (if attached) and set aside.
4. Remove the fluid basin and set aside.
5. Pivot the foot pan assemblies to the side to allow access to the foot end of the bed.
6. Using a Phillips screwdriver, remove the two screws from the bottom of the foot end litter cover. Save the screws.
7. Using a 5/8" combination wrench, remove the two fluid basin retaining posts and remove the foot end litter cover.
8. Unplug the cables from the foot power board. Note the locations of the cables so you can connect them to the proper location on the replacement power board. The letters on the cables match the lettered connections on the power board.
9. Using a Phillips screwdriver, remove the six screws that secure the foot power board to the mounting bracket. Save the screws. Remove the foot power board from the mounting bracket.
10. Reverse steps to install the supplied foot power board.
11. Plug the power cord into the wall outlet and test the functions of the bed.

12. Verify proper operation before you return the product to service.

## Brake adjustment

### Tools required:

- 3/8" drive ratchet
- 7/16" socket
- Slip joint pliers

### Procedure:

1. Put the brake pedal in the neutral position.
2. Remove the base cover on the side of the base with the brake needing adjustment. Pull up to separate the base cover from the base frame and remove the cover.
3. Using a 3/8" drive ratchet and 7/16" socket, loosen the brake ring pivot bolt.
4. Using slip joint pliers if needed, turn the brake adjuster until there is approximately a 3/8" gap between the top of the caster and the bottom of the brake ring. Hold the brake adjuster in position and, using a 3/8" drive ratchet and a 7/16" socket, tighten the brake ring pivot bolt.
5. Verify that the brakes can hold and release.
6. Reinstall the base cover removed in step 2.
7. Verify proper operation before you return the product to service.

## Bed lift motor replacement, 120V - 4701-700-005

### Tools required:

- 3/8" drive ratchet
- 7/16" socket
- T27 Torx driver
- Bungee cord
- Diagonal pliers
- Phillips screwdriver

### Procedure:

1. Raise the litter, the Fowler backrest, and the siderails to the highest height position.
2. Unplug the bed power cord from the wall outlet.
3. Using a Phillips screwdriver, remove the three Phillips screws that secure the plastic CPU board cover on the electrical pan. Save the screws. Remove and save the cover.
4. Using a Phillips screwdriver, remove the three Phillips screws that secure the front of the electrical pan to the litter. Save the screws.
5. Using a T27 Torx driver, remove the two T27 Torx screws at the head end of the bed below the power cord that secure the electrical panel to the litter. Save the screws.
6. Push forward and lift the electrical pan toward the foot end of the bed. Using a bungee cord, support the electrical pan from the siderail timing links.
7. Using diagonal pliers, cut the two cable ties that secure the cables to the mounting bracket.

---

**CAUTION** - Always hold the bed lift motor before you remove the last motor mounting bolt to avoid possible injury or product damage.

---

8. Unplug the bed lift motor quick connection.
9. Using a 3/8" drive ratchet and 7/16" socket, remove the two 7/16" bolts that secure the motor mounting bracket to the motor mount. Save the bolts.
10. Move the motor toward the head end of the bed and lift it up and out.
11. Reverse steps to install the supplied bed lift motor.
12. Verify proper operation before you return the product to service.

## Trendelenburg motor removal, 120V - 4701-032-095

### Tools required:

- 3/8" drive ratchet
- 7/16" deep well socket
- 5/16" nut driver
- T27 Torx driver
- Bungee cord
- Needle nose pliers
- Phillips screwdriver

### Procedure:

1. Raise the litter, the Fowler backrest, and the siderails to the highest height position.
2. Unplug the bed power cord from the wall outlet.
3. Using a Phillips screwdriver, remove the three Phillips screws that secure the plastic CPU board cover on the electrical pan. Save the screws. Remove and save the cover.
4. Unplug the Trendelenburg motor electrical connector (N) from the CPU board and cut the cable tie.
5. Using a 3/8" drive ratchet and a 7/16" deep well socket, remove the ground lug nut and the Trendelenburg motor ground wire.
6. Using a Phillips screwdriver, remove the three Phillips screws that secure the front of the electrical pan to the litter. Save the screws.
7. Using a T27 Torx driver, remove the two T27 Torx screws at the head end of the bed below the power cord that secure the electrical panel to the litter. Save the screws.
8. Push forward and lift the electrical pan toward the foot end of the bed. Using a bungee cord, support the electrical pan from the siderail timing links.
9. Unplug the two capacitor wires for the Trendelenburg motor.
10. Using a 5/16" nut driver, remove the two 5/16" screws from the limit switch bracket and lay the bracket over the side of the bed. Save the screws.

---

**WARNING** - Always use caution when you remove the rue clip and clevis pin to avoid possible injury or product damage. The bed will lean toward the foot end when you remove the rue clip and clevis pin from the motor drive tube. A hard stop will prevent excessive tipping.

---

**Note** - Apply downward or upward pressure on the head end litter top to remove the clevis pin.

11. Using needle nose pliers, remove the rue clip and the clevis pin from the Trendelenburg motor drive tube.
12. Using a T27 Torx driver, remove the four T27 Torx screws that secure the Trendelenburg motor to the litter. Save the screws.
13. Lift the motor up and out to remove.
14. Reinstall the supplied Trendelenburg motor. See *Trendelenburg motor replacement, 120V - 4701-032-095* (page 37).
15. Verify proper operation before you return the product to service.

# Trendelenburg motor replacement, 120V - 4701-032-095

## Tools required:

- 3/8" drive ratchet
- 7/16" deep well socket
- T27 Torx driver
- Bungee cord
- Phillips screwdriver
- Inclinator

## Procedure:

1. Position the supplied Trendelenburg motor at the head end of the litter. Using a T27 Torx driver, secure the supplied Trendelenburg motor through the mounting plate with four T27 screws.
2. Rotate the drive tube on the motor shaft toward the motor housing until there is a 1/4" gap between the end of the drive tube and the motor housing.
3. Slide the clevis pin through the drive tube and the Trendelenburg weldment to attach the drive tube. You may need to press down on the head end of the bed to align the drive tube with the Trendelenburg weldment. Install the rue-clip to secure the assembly.
4. Plug the motor cable into the connector (N) on the CPU board and attach the motor capacitor connections.
5. Plug the bed power cord into the wall outlet.

---

**WARNING** - Always keep your fingers clear of moving parts when you activate the Trendelenburg motor to avoid possible injury.

---

6. Place an inclinometer directly on the seat surface and press the **Trend** button until approximately 1° of Trendelenburg position is attained.
7. Reinstall the Trendelenburg switch bracket. With the fasteners in place, slide the bracket until the Trend Zero switch is on the verge of activation against the end of the drive tube (you will hear a soft click).
8. Press and hold the **Trend** button until the bed begins to move into a Trendelenburg position. Then press and hold the **Level** button and verify that it stops at 1° of Trendelenburg.
9. Plug in the two capacitor wires for the Trendelenburg motor.
10. Remove the bungee cord that secures the electrical pan.
11. Using a T27 Torx driver, install two T27 Torx screws at the head end of the bed below the power cord that secure the electrical panel to the litter.
12. Using a Phillips screwdriver, install the three Phillips screws that secure the front of the electrical pan to the litter.
13. Using a 3/8" drive ratchet and a 7/16" deep well socket, secure the ground lug nut and the Trendelenburg motor ground wire.
14. Plug the Trendelenburg motor electrical connector (N) from the CPU board and secure with a new cable tie.
15. Using a Phillips screwdriver, tighten the three Phillips screws that secure the plastic CPU board cover on the electrical pan.
16. Verify proper operation before you return the product to service.

## Fowler motor replacement, 120V - 4701-035-040

### Tools required:

- 3/8" drive ratchet
- 7/16" socket
- Bungee cord
- Slotted screwdriver
- 7/16" combination wrench
- Phillips screwdriver

### Procedure:

1. Raise the litter, the Fowler backrest (using the manual CPR release handle), and the siderails to the highest height position.
2. Using a Phillips screwdriver, remove the three Phillips screws that secure the plastic CPU board cover on the electrical pan. Save the screws. Remove and save the cover.
3. Lift the bellows cover up toward the Fowler backrest and, using a bungee cord, support it from the siderail timing links.
4. Insert a Phillips screwdriver in the side of the Fowler support bracket on either side of the bed. Pull the CPR handle to put pressure on the screwdriver and provide support for the Fowler.
5. If the bed has the Skoocher option, use the siderail button to move it all the way in toward the foot end of the bed.
6. Unplug the power cord from the wall outlet.
7. Pull up the corners of the motor cover to remove the four plastic push rivets. Using a slotted screwdriver, remove the push rivets, if necessary. Save the motor cover.
8. Unplug the electrical quick connector near the motor.
9. If the bed has the Skoocher option, use a 3/8" drive ratchet and a 7/16" socket to remove the two bolts that secure the Fowler motor mounting bracket to the litter frame. If the bed does not have the Skoocher option, use a 7/16" combination wrench. Hold the Fowler motor before you remove the last bolt.
10. Allow the motor to hang while you compress the white CPR coupler components together and remove the CPR coupler assembly.
11. Lift up on the Fowler motor and angle it over the motor frame support. Remove the patient right side Fowler motor.
12. Reverse steps to install the supplied motor.
13. Verify proper operation before you return the product to service.

## Fowler ball screw replacement - 4701-035-012

### Tools required:

- 3/8" drive ratchet
- 7/16" socket
- Large retaining ring pliers
- T27 Torx driver
- Slotted screwdriver
- Bungee cord
- Needle nose pliers
- Phillips screwdriver
- 5/8" combination wrench

### Procedure:

1. Raise the litter, the Fowler backrest, and the siderails to the highest height position.
2. Using a Phillips screwdriver, remove the three Phillips screws that secure the plastic CPU board cover on the electrical pan. Save the screws. Remove and save the cover.
3. Remove the foot section mattress assembly (if attached) and set it aside.
4. Remove the fluid basin and set aside.
5. Remove the head end mattress.
6. Using a T27 Torx driver, remove the four screws that secure the seat section to the litter frame. Save the screws.
7. Using a Phillips screwdriver, remove the two screws from the foot litter cover. Save the screws.
8. Using a 5/8" combination wrench, remove the two fluid basin buttons. Remove and save the cover.
9. Using a 3/8" drive ratchet and 7/16" socket, remove the ground strap from the seat section that is attached to the foot motor support bracket.
10. Remove the seat section.
11. Lift the bellows cover up toward the Fowler and, using a bungee cord, support it from the siderail timing links.
12. Insert a Phillips screwdriver in the side of the Fowler support bracket on either side of the bed. Pull the CPR handle to put pressure on the screwdriver and provide support for the Fowler.
13. Unplug the power cord from the wall outlet.
14. Pull up the corners of the motor cover to remove the four plastic push rivets. Use a slotted screwdriver to remove the push rivets, if necessary. Set aside the motor cover.
15. Using a 7/16" socket, remove the bolt and bushings that secure the steel potentiometer cable to the ball screw nut box.
16. Using a 7/16" socket, remove the bolt and bushing on the opposite side.
17. Using needle nose pliers, remove the cotter and clevis pins from the head end of the ball screw and slide the ball screw assembly out toward the foot end.
18. Using large retaining ring pliers, remove the retaining ring that secures the ball screw nut to the nut box and remove the nut box.
19. Using a 7/16" socket, remove the bolt from the hard stop collar at the end of the ball screw.
20. Reverse steps to install the supplied Fowler ball screw.  
  
**Note** - When you reinstall the cotter pin, be sure to fully bend it around the clevis pin to prevent it from contacting Fowler components during operation.
21. Verify proper operation before you return the product to service.

# Skoocher motor replacement

## Tools required:

- 3/8" drive ratchet
- 7/16" socket
- Slotted screwdriver
- Bungee cord
- Phillips screwdriver
- Diagonal pliers

## Procedure:

1. Raise the litter, the Fowler backrest (using the manual CPR release handle), and the siderails to the highest height position.
2. Using a Phillips screwdriver, remove the three Phillips screws that secure the plastic CPU board cover on the electrical pan. Save the screws. Remove and save the cover.
3. Lift the bellows cover up toward the Fowler backrest and, using a bungee cord, support it from the siderail timing links.
4. Insert a Phillips screwdriver in the side of the Fowler support bracket on either side of the bed. Pull the CPR handle to put pressure on the screwdriver and provide support for the Fowler.
5. Use the siderail button to move the Skoocher all the way toward the foot end of the bed if the motor will run.
6. Unplug the power cord from the wall outlet.
7. Pull up the corners of the motor cover to remove the four plastic push rivets. Using a slotted screwdriver, remove the push rivets, if necessary. Set aside the motor cover.
8. Unplug the electrical quick connector near the Skoocher motor.
9. Using a 3/8" drive ratchet and 7/16" socket, remove the two bolts that secure the Fowler motor mounting bracket to the litter frame. Hold the motor before you remove the last bolt.
10. Using a slotted screwdriver, compress the white CPR coupler components together and lift the motor out of the top of the assembly.
11. Using diagonal pliers, cut the cable tie that secures the capacitor and wires to the motor.
12. Using a 3/8" drive ratchet and 7/16" socket, remove the four bolts that secure the motor mounting bracket to the motor.
13. Reverse steps to install the supplied Skoocher motor.
14. Verify proper operation before you return the product to service.

## Foot motor replacement, 120V - 4701-040-035/230V - 4712-040-035

### Tools required:

- 3/8" drive ratchet
- 7/16" socket
- T27 Torx driver
- Crescent wrench
- 5/8" combination wrench
- 5/32" hex wrench
- Phillips screwdriver
- 3/8" hex wrench
- Diagonal pliers

### Procedure:

1. Raise the litter to the highest height position and lower the foot section to the lowest height position.  
**Note** - If it is necessary to manually lower the foot motor, remove the plastic foot end litter cover (see step 6) and use a crescent wrench to manually turn the manual backup nut at the end of the motor shaft.
2. Remove the head section mattress and set aside.
3. Remove and save the foot section assembly (if attached).
4. Pivot the foot pan assemblies to the side to allow access to the foot end of the bed.
5. Using a Phillips screwdriver, remove the two screws from the bottom of the plastic foot end litter cover. Save the screws.
6. Using a 5/8" combination wrench, remove the two steel fluid basin retaining posts from the front of the cover and remove the plastic foot end litter cover.
7. Using a T27 Torx driver, remove the four screws that secure the seat section to the litter frame and remove the seat section. Save the screws.
8. Using diagonal pliers, cut the cable tie that secures the capacitor to the litter frame. Cut the two cable ties that secure the motor power cable to the power board mounting bracket option.
9. Unplug the foot lift motor from the foot power board (connector F).
10. Using a 3/8" drive ratchet and 7/16" socket, remove the four bolts that secure the foot motor to the cross brace. Save the bolts.
11. Using a crescent wrench, turn the bottom of the motor shaft and lower the foot motor almost completely.
12. Slide the motor toward the patient left side of the bed. Lift and tip the motor toward the foot end of the bed to remove it from the litter.
13. Using a 5/32" hex wrench, remove the hex screw that secures the bottom hard stop collar on the motor shaft. Save the collar and screw.
14. Using a 3/8" hex wrench, remove the two hex screws that secure the upper motor hard stop on the motor shaft. Save the screws and hard stop.
15. Reverse steps to install the supplied motor.
16. Verify proper operation before you return the product to service.

# Air mattress compressor replacement option, 120V - 4701-048-015/230V - 4712-048-015

## Tools required:

- 3/8" drive ratchet
- 7/16" socket
- T27 Torx driver
- Crescent wrench
- 5/8" combination wrench
- 3/32" hex wrench
- Phillips screwdriver
- Diagonal pliers

## Procedure:

1. Raise the litter to the highest height position and lower the foot section to the lowest height position.  
**Note** - If you need to manually lower the foot motor, remove the plastic foot end litter cover (see step 6) and use a crescent wrench to manually turn the manual backup nut at the end of the motor shaft.
2. Remove the head section mattress. Save the head section mattress.
3. Remove the foot section assembly (if attached). Save the foot section assembly.
4. Pivot the foot pan assemblies to the side to allow access to the foot end of the bed.
5. Using a Phillips screwdriver, remove the two screws from the bottom of the plastic foot end litter cover. Save the screws.
6. Using a 5/8" combination wrench, remove the two steel fluid basin retaining posts from the front of the cover and remove the plastic foot end litter cover.
7. Using a T27 Torx driver, remove the four screws that secure the seat section to the litter frame and remove the seat section. Save the screws.
8. Using diagonal pliers, cut the cable tie that secures the capacitor to the litter frame. Cut the two cable ties that secure the motor power cable to the power board mounting bracket option.
9. Unplug the foot lift motor from the foot power board (connector F).
10. Using a 3/8" drive ratchet and 7/16" socket, remove the four bolts that secure the foot motor to the cross brace. Save the bolts.
11. Using a crescent wrench, turn the bottom of the motor shaft and lower the foot motor almost completely.
12. Slide the motor toward the patient left side of the bed. Lift and tip the motor toward the foot end of the bed to remove it from the litter.
13. Disconnect the air tubes from the quick-release connectors on the outside of the litter. Pull the hoses out of the channels on the foot end of the litter.
14. Using a Phillips screwdriver, remove the three screws that secure the mounting bracket assembly to the litter and carefully remove the assembly. Save the screws.
15. Unplug the compressor cable from the foot power board (connector B).
16. Using a 3/32" hex wrench, remove the four screws that secure the pump to the mounting bracket. Save the screws.
17. Reverse steps to install the supplied air mattress compressor.
18. Verify proper operation before you return the product to service.

## Night light replacement - 4701-080-080

### Tools required:

- Phillips screwdriver

### Procedure:

1. Raise the litter to highest height position.
2. Remove the foot section assembly (if attached) and set it aside.
3. Using a Phillips screwdriver, remove the screw that secures the night light assembly to the litter. Save the screw.
4. Unplug the two wire connections for the night light. Discard the night light.
5. Reverse steps to install the supplied night light.
6. Verify proper operation before you return the product to service.

## Nurse call 9V battery replacement

### Tools required:

- None

### Procedure:

**Note** - You should replace the 9V nurse call battery if the Power LED (located on the outside of both siderails) is flashing.

1. Unplug the power cord from the wall outlet and replace the battery.
2. Make sure that the Power LED is no longer flashing and operates when you select the different light.
3. Dispose of the old battery in accordance with local regulations.
4. Verify proper operation before you return the product to service.

## Diagnostics mode

To enter diagnostics mode:

1. Press and hold the **Trend** and **Reverse Trend/Level** buttons.
2. While you hold the **Trend** and **Reverse Trend/Level** buttons, plug the power cord back into the wall outlet.
3. Release the buttons. The Bed Up LED and the Bed Motion Lock LED on the siderail will flash to indicate the bed is in diagnostic mode.

To exit diagnostics mode:

1. Unplug the power cord from the wall outlet.

# Foot potentiometer replacement

## Tools required:

- 3/8" drive ratchet
- 7/16" socket
- Phillips screwdriver
- 5/8" combination wrench
- Diagonal pliers
- Crescent wrench

## Procedure:

1. Raise the litter to the highest height position and lower the foot section to the lowest height position.  
**Note** - If it is necessary to manually lower the foot motor, remove the plastic foot end litter cover (see step 5) and use a crescent wrench to manually turn the manual backup nut at the end of the motor shaft.
2. Remove the foot section assembly (if attached) and set it aside.
3. Pivot the foot pan assemblies to the side to allow access to the foot end of the bed.
4. Using a Phillips screwdriver, remove the two screws from the bottom of the plastic foot end litter cover. Save the screws.
5. Using a 5/8" combination wrench, remove the two steel fluid basin retaining posts from the front of the cover. Remove the plastic foot end litter cover.
6. Unplug the potentiometer electrical quick connect.
7. Using diagonal pliers, cut the cable tie at the top of the seat section near the bolt that secures the potentiometer.
8. Using a 3/8" drive ratchet and 7/16" socket, remove the bolt that secures the potentiometer steel cable to the foot lift casting. Remove the bolt and washer and slowly retract the potentiometer cable.
9. Using a 3/8" drive ratchet and 7/16" socket, hold the potentiometer with one hand and remove the bolt that secures the potentiometer to the seat section litter brace.
10. Reverse steps to install the supplied potentiometer. Perform the foot potentiometer burn-in procedure. See *Foot potentiometer burn-in procedure* (page 44).
11. Verify proper operation before you return the product to service.

# Foot potentiometer burn-in procedure

## Tools required:

- None

## Procedure:

1. Unplug the power cord from the wall outlet.
2. Enter diagnostics mode. See *Diagnostics mode* (page 43).
3. Press the **Bed Up** button and raise the litter far enough to prevent damage when the foot is fully lowered (approximately 25" from the floor to the seat top surface).
4. Press and hold the **Foot Down** button until the foot casting hits the lowest height position. Run the foot lift 3/8" from the bottom hard stop.

---

**CAUTION** - Always release the **Foot Down** button immediately if the foot support touches the litter frame or product damage could occur.

---

5. Press and hold the **Trend** button and then press the **Foot Down** button. The Bed Motion Lock LED will light and then flash on and off to indicate calibration.

6. Press and hold the **Foot Up** button until the foot casting hits the highest height position, and then run the foot lift down 3/8" from the upper hard stop.

---

**CAUTION** - Always release the **Foot Up** button immediately if the foot support touches the litter frame or product damage could occur.

---

7. Press the **Trend** button and then press the **Foot Up** button. The Bed Motion Lock LED will illuminate and then flash on and off to indicate calibration.
8. Unplug the power cord from the wall outlet to exit the diagnostics mode.

## Fowler potentiometer replacement - 4701-080-025

### Tools required:

- 3/8" drive ratchet
- 7/16" socket
- Phillips screwdriver
- Slotted screwdriver
- Bungee cord
- T27 Torx driver
- Diagonal pliers

### Procedure:

1. Raise the litter, the Fowler, and the siderails to the highest height position.
2. Using a Phillips screwdriver, remove the three screws that secure the CPU board cover on the electrical pan. Save the screws. Remove and save the cover.
3. Remove the foot section assembly (if attached) and set it aside.
4. Remove the head end mattress and set aside.
5. Using a T27 Torx driver, remove the four screws that secure the seat section to the litter frame and remove the seat section. Save the screws.
6. Lift the bellows cover up toward the Fowler and use a bungee cord to support it from the siderail timing links.
7. Insert a Phillips screwdriver in the side of the Fowler support bracket on either side of the bed. Pull the CPR handle to put pressure on the screwdriver and provide support for the Fowler.
8. Unplug the bed power cord from the wall outlet.
9. Pull up the corners of the motor cover and use a slotted screwdriver to remove the four plastic push rivets. Set aside the motor cover.
10. Using a 3/8" drive ratchet and a 7/16" socket, remove the bolt that secures the steel potentiometer cable to the Fowler guide weldment. Save the bolt. Do not drop the bushings.
11. Using a 3/8" drive ratchet and a 7/16" socket, remove the bolt that secures the potentiometer assembly to the frame. Save the bolt.
12. Using a Phillips screwdriver, remove the two screws that secure the head end of the large plastic underbody cover to the litter. Remove the two screws at the foot end of the cover and remove the cover. Save the screws.  
  
**Note** - The head end of the cover is supported by the litter.
13. Using diagonal pliers, cut the cable tie that secures the potentiometer cable.
14. Unplug the cable and remove the Fowler potentiometer.
15. Reverse steps to install the supplied Fowler potentiometer. Perform the foot potentiometer burn-in procedure. See *Foot potentiometer burn-in procedure* (page 44).
16. Verify proper operation before you return the product to service.

## Fowler potentiometer burn-in procedure

### Tools required:

- None

### Procedure:

1. Unplug the power cord from the wall outlet.
2. Enter diagnostics mode. See *Diagnostics mode* (page 43).
3. Press the **Reverse Trend/Level** button to level the litter surface.
4. Press the **Fowler Down** button until the top edge of the Fowler is approximately 1" from the plastic CPU board cover.
5. Press and hold the **Trend** button and then press the **Foot Down** button. The Bed Motion Lock LED will illuminate and then flash on and off to indicate calibration.
6. Unplug the power cord from the wall outlet to exit diagnostics mode.

## Lift potentiometer replacement - 4701-080-025

### Tools required:

- Phillips screwdriver
- Diagonal pliers
- Bungee cord
- T27 Torx driver

### Procedure:

1. Raise the litter, the Fowler backrest, and the siderails to the highest height position.
2. Using a Phillips screwdriver, remove the three screws that secure the CPU board cover on the electrical pan. Save the screws. Remove and save the cover.
3. Lift the bellows cover up toward the Fowler backrest and use a bungee cord to support it from the siderail timing links.
4. Unplug the power cord from the wall outlet.
5. Remove the potentiometer cable from the tab on the lift tube weldment and retract the cable back to the potentiometer.
6. Using diagonal pliers, cut the cable tie that secures the potentiometer cable to the electrical panel.
7. Unplug the potentiometer.
8. Using a T27 Torx driver, remove the screw that secures the potentiometer to the litter frame and remove the potentiometer. Save the screw.
9. Reverse steps to install the supplied lift potentiometer. Perform the lift potentiometer burn-in procedure. See *Lift potentiometer burn-in procedure* (page 46).
10. Verify proper operation before you return the product to service.

## Lift potentiometer burn-in procedure

### Tools required:

- None

### Procedure:

1. Unplug the power cord from the wall outlet.
2. Enter diagnostics mode. See *Diagnostics mode* (page 43).
3. Press the **Foot Up** button and raise the foot section far enough to prevent damage when the litter is fully lowered.

4. Press the **Reverse Trend/Level** button to level the litter surface.
5. Press the **Bed Down** button and lower the litter until the distance from the floor to the seat section surface measures 17.5 (+0.5/-0.0) inches for a bed with 6" casters or 19.5 (+0.5/-0.0) inches for a bed with 8" casters.
6. Press the **Trend** button and then press the **Bed Down** button. The Bed Motion Lock LED will light and then flash on and off to indicate calibration.
7. Press the **Bed Up** button and raise the litter until the distance from the floor to the seat section surface measures 35.5 (+0.0/-0.5) inches for a bed with 6" casters or 37.5 (+0.0/-0.5) inches for a bed with 8" casters.
8. Press the **Trend** button and then press the **Bed Up** button. The Bed Motion Lock LED will illuminate and then flash on and off to indicate calibration.
9. Unplug the power cord from the wall outlet to exit diagnostics mode.

## Smart TV interface burn-in procedure

**Note** - The product must have the hardware for this option installed before you perform the burn-in procedure.

### Tools required:

- None

### Procedure:

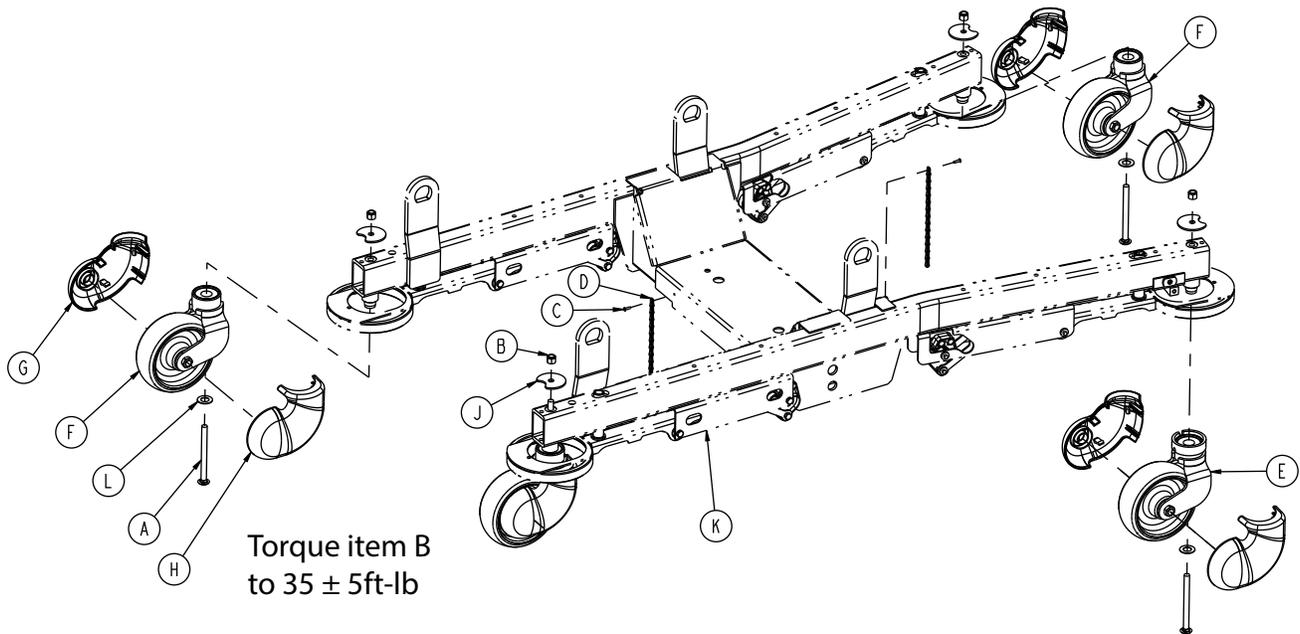

1. Unplug the power cord from the wall outlet.
2. Enter diagnostics mode. See *Diagnostics mode* (page 43).
3. The Nurse Call LED (yellow) on the inside panel of each siderail is flashing. This represents one of the 10 TV selections shown in the table below. The Nurse Answer LED (green) on the inside of each siderail is flashing on/off at a slow rate.
4. Press and release the TV **On/Off** button on the siderail. The Nurse Call LED (yellow) flashes once with each press. This flash code is defined in the table below. The Nurse Answer LED (green) is flashing on/off at a slow rate. The Nurse Answer LED (green) will only illuminate when the Nurse Call LED (yellow) is flashing.
5. Press and release the TV **On/Off** button on the siderail to increment to other TV modes. The Nurse Call LED (yellow) flashes consecutively the number listed in the table below. This number represents the TV mode selected.
6. When the desired TV manufacturer has been selected, unplug the power cord from the wall outlet and plug it back in to complete the Smart TV burn-in procedure.

TV MANUFACTURER SELECTION FOR SMART TV BURN-IN PROCEDURE		
Press and release TV ON/OFF switch	Nurse Call LED (yellow)	TV Manufacturer
One time	One flash	RCA 1
Two times	Two flashes	RCA 2
Three times	Three flashes	Zenith 1
Four times	Four flashes	Zenith 2
Five times	Five flashes	Philips/Magnavox
Six times	Six flashes	Magnavox (models 9120, 9220, 9320)
Seven times	Seven flashes	Traditional TV
Eight times	Eight flashes	Traditional Plus
Nine times	Nine flashes	Auto Detect: Smart TV
Ten times	Ten flashes	Auto Detect W/Digital Volume Smart TV

# EMC information

Guidance and manufacturer's declaration - electromagnetic emissions		
The Model 4701 is intended for use in the electromagnetic environment specified below. The customer or the user of the Model 4701 should assure that it is used in such an environment.		
Emissions test	Compliance	Electromagnetic environment
RF Emissions CISPR 11	Group 1	The Model 4701 uses RF energy only for its internal function. Therefore, its RF emissions are very low and are not likely to cause any interference in nearby electronic equipment.  The Model 4701 is suitable for use in all establishments other than domestic and those directly connected to the public low-voltage power supply network that supplies buildings used for domestic purposes.
RF Emissions CISPR 11	Class A	
Harmonic Emissions IEC 61000-3-2	Class A	
Voltage Fluctuations Flicker Emissions IEC 61000-3-3	Complies	

Guidance and manufacturer's declaration - electromagnetic immunity			
The Model 4701 is suitable for use in the electromagnetic environment specified below. The customer or the user of the Model 4701 should assure that it is used in such an environment.			
Immunity test	EN/IEC 60601 test level	Compliance level	Electromagnetic environment-guidance
Electrostatic discharge (ESD) EN/IEC 61000-4-2	$\pm 6$ kV contact $\pm 8$ kV air	$\pm 6$ kV contact $\pm 8$ kV air	Floors should be wood, concrete or ceramic tile. If floors are covered with synthetic material, the relative humidity should be at least 30%.
Electrostatic fast Transient/ burst IEC 61000-4-4	$\pm 2$ kV for power supply lines $\pm 1$ kV for input/output lines	$\pm 2$ kV for power supply lines $\pm 1$ kV for input/output lines	Main power quality should be that of a typical commercial or hospital environment.
Surge IEC 61000-4-5	$\pm 8$ kV differential mode $\pm 2$ kV common mode	$\pm 8$ kV differential mode $\pm 2$ kV common mode	Main power quality is that of a typical commercial or hospital environment.

**Guidance and manufacturer's declaration - electromagnetic immunity**

Voltage dips, voltage variations and short interruptions on power supply input lines  IEC 61000-4-11	<5% $U_T$ (>95% dip in $U_T$ ) for 0.5 cycle  40% $U_T$ (60% dip in $U_T$ ) for 5 cycles  70% $U_T$ (30% dip in $U_T$ ) for 25 cycles  <5% $U_T$ (>95% dip in $U_T$ ) for 5 sec.	<5% $U_T$ (>95% dip in $U_T$ ) for 0.5 cycle  40% $U_T$ (60% dip in $U_T$ ) for 5 cycles  70% $U_T$ (30% dip in $U_T$ ) for 25 cycles  <5% $U_T$ (>95% dip in $U_T$ ) for 5 sec.	Main power quality should be that of a typical commercial or hospital environment. If the user of the Model 4701 requires continued operation during power main interruptions, it is recommended that the device be powered from an uninterruptible power supply or a battery.
Power frequency (50/60Hz) magnetic field  EN/IEC 61000-4-8	3 A/m	3 A/m	Power frequency magnetic fields should be at levels characteristic of a typical location in a typical commercial or hospital environment.

**Note:**  $U_T$  is the a.c. mains voltage before applications of the test level.

**Guidance and manufacturer's declaration - electromagnetic immunity**

The Model 4701 is suited for use in the electromagnetic environment specified below. The customer or the user of the Model 4701 should assure that it is used in such an environment.

Immunity test	EN/IEC 60601 test level	Compliance level	Electromagnetic environment-guidance
---------------	-------------------------	------------------	--------------------------------------

**Guidance and manufacturer's declaration - electromagnetic immunity**

<p style="text-align: center;">Conducted RF EN/IEC 61000-4-6</p> <p style="text-align: center;">Radiated RF EN/IEC 61000-4-3</p>	<p style="text-align: center;">3 Vrms 150 kHz to 80 MHz</p> <p style="text-align: center;">3 V/m 80 MHz to 2.5 GHz</p>	<p style="text-align: center;">3 Vrms</p> <p style="text-align: center;">3 V/m</p>	<p>Portable and mobile RF communications equipment should be used no closer to any part of the Model 4701, including cables, than the recommended separation distance calculated from the equation appropriate for the frequency of the transmitter.</p> <p>Recommended separation distance</p> <p><math>D=(1.2) (\sqrt{P})</math></p> <p><math>D=(1.2) (\sqrt{P})</math></p> <p>80 MHz to 800 MHz</p> <p><math>D=(2.3) (\sqrt{P})</math></p> <p>800 MHz to 2.5 GHz</p> <p>where <math>P</math> is the maximum output power rating of the transmitter in watts (<math>W</math>) according to the transmitter manufacturer and <math>d</math> is the recommended separation distance in meters (<math>m</math>).</p> <p>Field strengths from fixed RF transmitters, as determined by an electromagnetic site survey,<sup>a</sup> should be less than the compliance level in each frequency range.<sup>b</sup></p> <p>Interference may occur in the vicinity of equipment marked with the following symbol:</p> <div style="text-align: center;">  </div>
--	--	--	---

**Note 1:** At 80 MHz and 800 MHz, the higher frequency range applies.

**Note 2:** These guidelines may not apply in all situations. Electromagnetic propagation is affected by absorption and reflection from structures, objects and people.

<sup>a</sup> Field strengths from fixed transmitters, such as base stations for radio (cellular/cordless) telephones and land mobile radios, amateur radio, AM and FM radio broadcast, and TV broadcast cannot be predicted theoretically with accuracy. To assess the electromagnetic environment due to fixed RF transmitters, an electromagnetic site survey should be considered. If the measured field strength in the location in which the Model 4701 is used exceeds the applicable RF compliance level above, the Model 4701 should be observed to verify normal operation. If abnormal performance is observed, additional measures may be necessary, such as reorienting or relocating the Model 4701.

<sup>b</sup> Over the frequency range 150 kHz to 80 MHz, field strengths are less than 3 V/m.

**Recommended separations distances between portable and mobile RF communications equipment and the Model 4701**

The Model 4701 is intended for use in an electromagnetic environment in which radiated RF disturbances are controlled. The customer or the user of the Model 4701 can help prevent electromagnetic interferences by maintaining a minimum distance between portable and mobile RF communications equipment (transmitters) and the Model 4701 as recommended below, according to the maximum output power of the communications equipment.

Rated maximum output power of transmitter W	Separation distance according to frequency of transmitter m		
	150 kHz to 80 MHz $D=(1.2) (\sqrt{P})$	80 MHz to 800 MHz $D=(1.2) (\sqrt{P})$	800 MHz to 2.5 GHz $D=(2.3) (\sqrt{P})$
0.01	1.12	0.12	0.23
0.1	0.38	0.38	0.73
1	1.2	1.2	2.3
10	3.8	3.8	7.3
100	12	12	23

For transmitters rated at a maximum output power not listed above, the recommended separation distance  $d$  in meters (m) can be estimated using the equation applicable to the frequency of the transmitter, where  $P$  is the maximum output power rating of the transmitter in watts (W) according to the transmitter manufacturer.

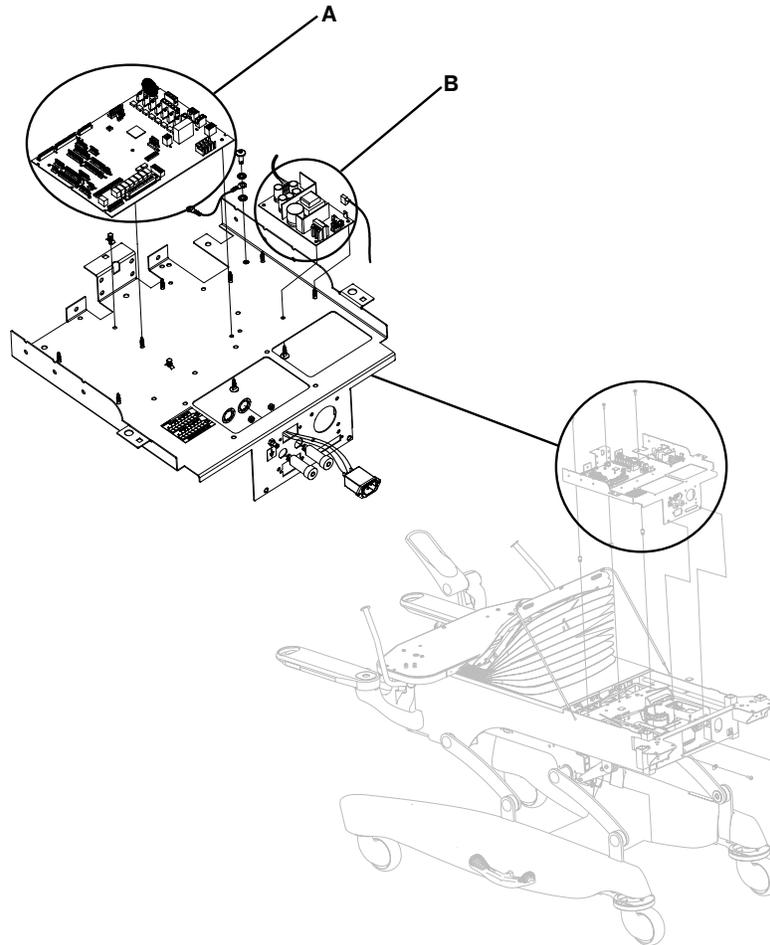

**Note 1:** At 80 MHz and 800 MHz, the separation distance for the higher frequency range applies.

**Note 2:** These guidelines may not apply in all situations. Electromagnetic propagation is affected by absorption and reflection from structures, objects and people.
