# Introduction

## INTRODUCTION

This manual is designed to assist you with the maintenance of the Stryker Model 2030 Epic II and Epic II + Critical Care Beds. Read it thoroughly before using the equipment or beginning any maintenance on it.

## SPECIFICATIONS

Safe Working Load	500 pounds (227 kilograms) 
Scale System Capacity (optional equipment)	Loads weighing up to 500 pounds (227 kilograms)
Scale System Accuracy (optional equipment)	$\pm 1$ pound of total patient weight at any bed position <sup>1</sup> (patients weighing 100 pounds or less) $\pm 1\%$ of total patient weight at any bed position <sup>1</sup> (patients weighing greater than 100 pounds)
Overall Bed Length/Width	L-91" /W-42.5" or L-231 cm /W-108 cm
Minimum/Maximum Bed Height (Standard)	18" to 32.5" $\pm 0.5$ / 46 cm. to 82.5 cm.
Minimum/Maximum Bed Height (Enhanced)	19.5" to 34.5" $\pm 0.5$ / 49.5 cm. to 88 cm. (Add 2 inches if the bed has 8" casters.)
Fluoro Access	17.5" (Epic II®), 16" (Epic II®+)
Knee Gatch Angle	0° to 30°
Back Angle	0° to 90°
Trendelenburg/Reverse Trendelenburg	-12° to +12° $\pm 2^\circ$
Electrical Requirements	115 VAC, 60 Hz, 7.0 Amps / 230 VAC, 50/60 Hz, 4.0 Amps 100 VAC, 50/60 Hz, 9.0 Amps (Japan Option)
Battery Voltage (Optional)	24 V, 31 Ah
Noise Level	> 65 Decibels
Outlet Option	125 VAC, 5A, 60 Hz

<sup>1</sup> If the bed is equipped with the enhanced height option, the scale accuracy is as described above for litter angles from 0° to  $\pm 5^\circ$  Trend.

## MATTRESS SPECIFICATIONS

Thickness	6"
Width	$\geq 35$ "
Length	$\geq 84$ "
ILD	80

Stryker reserves the right to change specifications without notice.

# Introduction

---

## WARNING / CAUTION / NOTE DEFINITION

The words WARNING, CAUTION and NOTE carry special meanings and should be carefully reviewed.

### WARNING

Alerts the reader about a situation, which if not avoided, could result in death or serious injury. It may also describe potential serious adverse reactions and safety hazards.

---

### CAUTION

Alerts the reader of a potentially hazardous situation, which if not avoided, may result in minor or moderate injury to the user or patient or damage to the equipment or other property. This includes special care necessary for the safe and effective use of the device and the care necessary to avoid damage to a device that may occur as a result of use or misuse.

### NOTE

This provides special information to make maintenance easier or important instructions clearer.

## SAFETY TIPS AND GUIDELINES

Before operating the Epic II® and Epic II®+ Critical Care Beds, it is important to read and understand all information in this manual. Carefully read and strictly follow the guidelines listed on this page and the following pages. To ensure safe operation of the bed, methods and procedures must be established for educating and training hospital staff on the intrinsic risks associated with the usage of electric beds.

### WARNING

- The Epic II® Critical Care Bed is equipped with a hospital grade plug for protection against shock hazard. It must be plugged directly into a properly grounded three-prong receptacle. Grounding reliability can be achieved only when a hospital grade receptacle is used.
  - Serious injury can result if caution is not used when operating the bed. Operate bed only when all persons are clear of the electrical and mechanical systems.
  - To help reduce the number and severity of falls by patients, always leave the bed in the lowest position when the patient is unattended.
  - When raising the siderails, listen for the "click" that indicates the siderail has locked in the up position. Pull firmly on the siderail to ensure it is locked into position. Siderails are not intended to be a patient restraint device. It is the responsibility of attending medical personnel to determine the degree of restraint and the siderail positioning necessary to ensure a patient will remain safely in bed.
  - Always apply the caster brakes when a patient is getting on or off the bed. Always keep the caster brakes applied when a patient is on the bed (except during transport). Serious injury could result if the bed moves while a patient is getting in or out of bed. After the brake pedal is applied, push on the bed to ensure the brakes are locked. When moving the bed, toggle the steer pedal to put the bed in the steer mode. This locks the swivel motion of the right foot end caster and makes the bed easier to move.
  - Ensure the brakes are completely released prior to attempting to move the bed. Attempting to move the bed with the brakes actuated could result in injury to the user and/or patient.
  - Assistance is required to lower the Back if the angle of the Back is greater than 80° when the CPR emergency release is activated. Attempting to lower the Back in this position without assistance may result in injury to the operator.
-

# Introduction

---

## SAFETY TIPS AND GUIDELINES CONTINUED

---

- The Bed Exit System is intended only to aid in the detection of a patient exiting the bed. It is NOT intended to replace patient monitoring protocol. The bed exit system signals when a patient is about to exit. Adding or subtracting objects from the bed after arming the bed exit system may cause a reduction in the sensitivity of the bed exit system.
- If the bed is equipped with the Epic II®+ option, there is a power save mode. The power save mode is activated after one hour on battery power with no motion release switch activation. Functions including Bed Exit, scale and motion will cease to operate when the unit enters the power save mode. Injury to the patient could occur if proper patient monitoring protocol is not observed.
- Due to the weight the battery back-up option adds to the bed (approximately 50 pounds), additional force is required to move a bed equipped with the Epic II®+ Option. Caution should be used when transporting this bed. Additional assistance should be used when necessary. Failure to use caution while transporting this bed may result in injury to the user.
- Always unplug bed during service or cleaning. When working under the bed, always place blocks under the litter frame to prevent injury in case the Bed Down switch is accidentally activated.
- The battery tray assembly weighs 50 pounds. Take care when removing the two hex head screws securing it to the base frame or personal injury could result.
- Battery posts, terminals and related accessories contain lead and lead compounds, chemicals known to the State of California to cause cancer and birth defects or other reproductive harm. **Wash hands after handling.**
- The Epic II® Critical Care Bed is not intended for pediatric use or for patients under 50 pounds.
- Explosion Hazard – do not use bed in the presence of flammable anesthetics.
- To avoid entanglement, possibly resulting in frayed power cords and risk of electrical shock, wrap the bed power cord around the roller bumpers at the head end of the bed during transport.
- Service only by qualified personnel. Refer to the maintenance manual. Verify the power cord is unplugged and the battery power switch (Epic II®+ option) is turned to the off position before servicing.
- When using the Symmetric Aire™ Mattress extra caution and or operator supervision is required to help reduce the likelihood of a patient fall occurring.

To avoid possible injury and to assure proper operation when using a powered mattress replacement system such as XPRT:

- Confirm proper scale system operation following mattress installation. For best results, secure the therapy mattress power cord to prevent damage to the cord or interference with the bed frame and the scale system.
  - Do not zero bed scales or weigh patient with Percussion, Vibration, Rotation or Turn-Assist active. Patient motion and position resulting from the dynamic therapy mattress may adversely affect scale system performance.
  - Do not initialize (“arm”) bed exit with Percussion, Vibration, Rotation or Turn-Assist active. The patient motion and position resulting from the dynamic therapy mattress may adversely affect bed exit system performance.
  - When using an XPRT Therapy Mattress extra caution and or operator supervision is required to help reduce the likelihood of a patient fall occurring.
-

# Introduction

---

## SAFETY TIPS AND GUIDELINES CONTINUED

---

### CAUTION

- Scale function may be affected by siderail/caster interference. With the litter fully lowered or lowered in Reverse Trendelenburg, the siderails tucked under the litter in the storage position and the casters turned, there is the potential for interference between the siderail and the caster. Raise the siderails when lowering the litter to the full down position to prevent the interference from causing the bed's scale system to weigh inaccurately.
- The lockout buttons on the foot board lock the Fowler, Gatch and Bed Up/Down functions and prevent motion of the bed. It is the responsibility of attending medical personnel to determine whether these functions should be locked and to use the buttons accordingly.
- Because individual beds may have different options, foot boards should not be moved from one bed to another. Mixing foot boards could result in unpredictable bed operation.
- If large fluid spills occur in the area of the circuit boards or motors, immediately unplug the bed power cord from the wall socket. Remove the patient from the bed and clean up the fluid. Have maintenance completely check the bed. Fluids can short out controls and may cause the bed to operate erratically or make some functions completely inoperable. Component failure caused by fluids could cause the bed to operate unpredictably and could cause injury to the patient. DO NOT put the bed back into service until it is completely dry and has been thoroughly tested for safe operation.
- Preventative maintenance should be performed at a minimum of annually to ensure all features are functioning as designed. Close attention should be given to safety features including, but not limited to:

Safety side latching mechanisms	Caster braking systems
Leakage current 300 microamps max.	No controls or cabling entangled in bed mechanisms
Frayed electrical cords and components	All controls return to off or neutral position when released
- The siderails are not intended to be used as a pushing device. Damage to the siderails could occur.
- The use of a mattress overlay may reduce the effectiveness of the siderail.
- When attaching equipment to the bed, ensure it will not impede normal bed operation or patient injury could occur. For example: hooks on hanging equipment must not actuate control buttons, equipment must not hide the nurse call button, etc.
- The weight of the IV bags should not exceed 40 pounds.
- Do not add or remove weight when the bed exit system is armed.
- The cleanliness and integrity of both ground chains must be maintained to minimize static build-up and discharge.
- IV Poles should not be used as a bed push/pull device.

The following Caution statements apply to the optional outlet:

- Maximum total load 5A receptacle rating: 125VAC, 5A, 60Hz.
- The total system chassis risk current should not exceed 300uA
- Grounding continuity should be checked periodically.
- Do not use for life-sustaining equipment.
- Use only hospital-grade equipment with electrical outlet.
- Unplug free-standing equipment before transporting the bed.

# Introduction

---

## SET-UP PROCEDURES

It is important that the Epic II® Critical Care Bed is working properly before it is put into service. The following list will help ensure that each part of the bed is checked.

- Plug the bed into a properly grounded, hospital grade wall receptacle.

### **WARNING**

The Epic II® Critical Care Bed is equipped with a hospital grade plug for protection against shock hazard. It must be plugged directly into a properly grounded three-prong receptacle. Grounding reliability can be achieved only when a hospital grade receptacle is used.

- 
- Depress the pedal at either side of the bed fully to set the four wheel brakes and ensure all four casters lock. Depress the pedal again to release the brakes.
  - Toggle the steer pedal to put the bed in the steer mode and ensure the locking caster engages.
  - Ensure the siderails raise and lower smoothly and lock in the up and intermediate positions.
  - Run through each function on the foot board control panel and ensure that each is working properly.
  - Ensure all functions are working properly on the siderail controls.
  - Raise the Back up to approximately 60°. Squeeze the CPR release handle and ensure the Back and Knee will drop with minimal effort.
  - If the bed is equipped with the Epic II®+ battery backup option, unplug the power cord from the wall socket. Push the battery power switch located on the lower left corner of the head end to the "ON" position. Again, verify each function on the foot board and siderails is operating properly. The 12 volt batteries that provide back-up power to the unit functions with the Epic II®+ option will charge whenever the power cord is plugged into the wall socket. The batteries require approximately 10 hours of charging time before the bed is put into service.
  - If the bed is equipped with the Nurse Call option, verify it is functioning properly prior to patient use.

# Introduction

---

## BED SYMBOLS

Warning, Refer to Service/Maintenance Manual

Alternating Current

Type B Equipment: equipment providing a particular degree of protection against electric shock, particularly regarding allowable leakage current and reliability of the protective earth connection.

Class 1 Equipment: equipment in which protection against electric shock does not rely on BASIC INSULATION only, but which includes an additional safety precaution in that means are provided for the connection of the EQUIPMENT to the protective earth conductor in the fixed wiring of the installation in such a way that ACCESSIBLE METAL PARTS cannot become live in the event of a failure of the BASIC INSULATION.

Mode of Operation: Continuous

IPX4: Protection from liquid splash

Dangerous Voltage Symbol

Protective Earth Terminal

Potential Equalization Symbol

Medical Equipment Classified by Underwriters Laboratories Inc. with Respect to Electric Shock, Fire, Mechanical and Other Specified Hazards Only in Accordance with UL 2601-1 and CAN/CSA C22.2 No. 601.1

Safe Working Load Symbol

In accordance with European Directive 2002/96/EC on Waste Electrical and Electronic Equipment, this symbol indicates that the product must not be disposed of as unsorted municipal waste, but should be collected separately. Refer to your local distributor for return and/or collection systems available in your country.

# Introduction

---

## BED SYMBOLS

1. Press to raise back section.
2. Press to raise knee section.
3. Press to lower back section.
4. Press to lower knee section.
5. Press to activate nurse call.
6. Press to lower the head end of the bed (Trendelenburg).
7. Press to lower the foot end of the bed (Reverse Trendelenburg).
8. Press to raise the litter. If your bed is equipped with the enhanced height option, continue to hold the button an additional 5 seconds after the first stop. The litter will raise an additional 2 inches.
9. Press to lower the litter.
10. Press to activate emergency CPR positioning.
11. Press to activate emergency Cardiac Chair positioning.

# Introduction

---

## BED SYMBOLS

1. Press to raise knee section.
2. Press to raise back section.
3. Press to lower knee section.
4. Press to lower back section.
5. Press to activate the nurse call.
6. Press to turn on the TV or radio. Press again to change TV channels and to turn off the TV.
7. Press to increase the TV or radio volume.
8. Press to decrease the TV or radio volume.
9. Press to turn on the room lights. Press again to turn off.
10. Press to turn on the reading light. Press again to turn off.

# Introduction

## BED SYMBOLS

### WARNING

Because individual beds may have different options, foot boards should not be moved from one bed to another. Mixing foot boards could result in unpredictable bed operation.

1. Press repeatedly for low, medium and high settings for the siderail control lights. Continue to press this switch to turn off the siderail control lights and the nurse call indicator light.
2. Press to lock out all bed motion controls on the siderails. Press again to unlock.
3. Press to lock out Back motion control on the siderails. Press again to unlock.
4. Press to lock out Knee motion control on the siderails. Press again to unlock.
5. Press to lock out bed up/down motion controls on the siderails. Press again to unlock.
6. Press to raise bed. If your bed is equipped with the enhanced height option, continue to hold the button an additional 5 seconds after the first stop. The litter will raise an additional 2 inches.
7. Press to lower bed.
8. Press to lower head end of bed (Trendelenburg).
9. Press to lower foot end of bed (Reverse Trendelenburg).

1. Press to raise back section.
2. Press to raise knee section.
3. Press to lower back section.
4. Press to lower knee section.

# Introduction

---

## BED SYMBOLS

1. Press to activate the emergency CPR drop function. The bed will level from Trendelenburg/reverse Trendelenburg, the Fowler will lower to flat, the Knee will lower to flat and the litter will lower to full down.
2. Press to activate the Cardiac Chair function. The Knee will raise, the Fowler will raise or lower to approximately 52° and the bed will tilt to approximately -12° reverse Trendelenburg (foot end down) or -14° if the bed has the enhanced height option. Release the button to stop bed movement: hold the button until movement stops to complete the function.

1. Push to arm the Bed Exit function.
2. Push to disarm the Bed Exit function.
3. "BED EXIT ON" LED – will light when the BED EXIT function is armed.

# Introduction

## BED SYMBOLS

1. Press to arm or disarm the Bed Exit function.
2. Press to select the zone desired for Bed Exit function.
3. "BED EXIT ON" LED – will light when the BED EXIT function is armed.

1. LCD – displays patient weight. Trendelenburg angle is displayed when the scale is not active.
2. Press to zero bed. Also press to scroll while Menu Mode is active.
3. Press to enter and exit the Menu Mode.
4. Press when adding or removing equipment to the bed.
5. Press to turn weigh system on and off. Also press to scroll while Menu Mode is active.
6. Press to change weight from pounds to kilograms or back. Also press while using the Menu Mode.

# Introduction

## BED SYMBOLS

# Introduction

## BED SYMBOLS

1. Press and hold to raise the litter. If your bed is equipped with the enhanced height option, continue to hold the button an additional 5 seconds after the first stop. The litter will raise an additional 2 inches.
2. Press and hold to lower the litter
3. Press to raise the Knee section.
4. Press to lower the Knee section.
5. Press to raise the Back section.
6. Press to lower the Back section.
7. The "Plug Bed In To Charge" LED will be illuminated while the battery power switch is on if the battery level is low. Plug the bed power cord into the wall socket to charge the batteries.

# Preventative Maintenance

---

## CLEANING

Hand wash all surfaces of the bed with warm water and mild detergent. DRY THOROUGHLY. Do not steam clean or hose off the Epic II Bed. Do not immerse any part of the bed. Some of the internal parts of the bed are electric and may be damaged by exposure to water.

Suggested cleaners for bed surfaces:

- Quaternary Cleaners (active ingredient – ammonium chloride)

- Phenolic Cleaners (active ingredient – o-phenylphenol)

- Chlorinated Bleach Solution (5.25% – less than 1 part bleach to 100 parts water)

Avoid over-saturation and ensure the product does not stay wet longer than the chemical manufacturer's guidelines for proper disinfecting.

### CAUTION

SOME CLEANING PRODUCTS ARE CORROSIVE IN NATURE AND MAY CAUSE DAMAGE TO THE PRODUCT IF USED IMPROPERLY. If the products described above are used to clean Stryker patient care equipment, measures must be taken to insure the beds are wiped with clean water and thoroughly dried following cleaning. Failure to properly rinse and dry the beds will leave a corrosive residue on the surface of the bed, possibly causing premature corrosion of critical components. Failure to follow the above directions when using these types of cleaners may void this product's warranty.

For mattress cleaning instructions, please see the tag on the mattress, or contact the mattress manufacturer.

Clean Velcro® AFTER EACH USE. Saturate Velcro® with disinfectant and allow disinfectant to evaporate. (Appropriate disinfectant for nylon Velcro® should be determined by the hospital.)

# Preventative Maintenance

---

## CHECKLIST

- \_\_\_\_\_ All fasteners secure
- \_\_\_\_\_ Engage brake pedal and push on the bed to ensure all casters lock securely
- \_\_\_\_\_ Optional locking steer caster engages and disengages properly
- \_\_\_\_\_ Siderails move, latch and stow properly
- \_\_\_\_\_ All functions on siderails working properly (including LED's)
- \_\_\_\_\_ Head End Control Panel working properly (including LED) – optional equipment
- \_\_\_\_\_ Confirm battery powered functionality – optional equipment
- \_\_\_\_\_ Trolley and CPR release working properly
- \_\_\_\_\_ Optional Foot prop intact and working properly
- \_\_\_\_\_ I.V. pole working properly
- \_\_\_\_\_ Optional accessories intact and working properly
- \_\_\_\_\_ No cracks or splits in head and foot boards
- \_\_\_\_\_ All functions on footboard working properly (including LED's)
- \_\_\_\_\_ No rips or cracks in mattress cover
- \_\_\_\_\_ Scale and Bed Exit system calibrated properly – optional equipment
- \_\_\_\_\_ Power cord not frayed
- \_\_\_\_\_ No cables worn or pinched
- \_\_\_\_\_ All electrical connections tight
- \_\_\_\_\_ All grounds secure to the frame
- \_\_\_\_\_ Ground impedance not more than 100 milliohms
- \_\_\_\_\_ Current leakage not more than 300 microamps
- \_\_\_\_\_ Ensure ground chains are clean, intact, and have at least two links touching the floor
- \_\_\_\_\_ All electrical components and wiring are properly labeled

Bed Serial No. \_\_\_\_\_

_____	_____
_____	_____
_____	_____
_____	_____
_____	_____

Completed By: \_\_\_\_\_ Date: \_\_\_\_\_

## NOTE

Preventative maintenance should be performed at a minimum of annually. A preventative maintenance program should be established for all Stryker Medical equipment. Preventative maintenance may need to be performed more frequently based on the usage level of the product.

# Preventative Maintenance

---

## GENERAL INFORMATION

### NOTE

To prevent a low battery condition when the bed is not plugged in, position the cord out switch at the head end of the bed to the off position. The switch is identified by the label shown below. If the switch is not positioned as shown below and the bed power cord and pendant cord are unplugged, the life of the back-up battery will be significantly reduced.

If the power light (located on the foot board) is flashing, the Nurse Call battery needs to be replaced. The battery is located on the patient's left side at the head end of the bed. No tools are required to replace the battery. Unplug the bed power cord from the wall socket and replace the battery. Properly dispose of the old battery in accordance with local regulations.

## BATTERY CHARGER CIRCUIT BREAKER (EPIC II+ OPTION)

If the battery charger circuit breaker(s) located under the litter on the patient's head end, left side are tripped, refer to the troubleshooting section of the maintenance manual.

# Service Information

---

The electronic circuits in the 2030 are completely protected from static electricity damage only while the bed is assembled. It is extremely important that all service personnel always use adequate static protection when servicing the electronic systems of the 2030. *Whenever you are touching wires, you should be using static protection.*

## Static Protection Equipment

The necessary equipment for proper static protection is:

- 1 static wrist strap; 3M part number 2214 or equivalent,
- 1 grounding plug; 3M part number 61038 or equivalent,
- 1 test lead with a banana plug on one end and an alligator clip on the other; Smith part number N132B699 or equivalent.

---

### CAUTION

All electronic service parts will be shipped in static shielding bags. Do not open the bags until you have completed steps 2 and 3 of the following procedure. Do not place unprotected circuit boards on the floor. All circuit boards to be returned to Stryker Medical should be shipped in the static shielding bags the new boards were shipped in.

## Static Protection Procedure

1. Unplug the power cord from the wall receptacle.
2. Insert the grounding plug into a properly grounded hospital grade wall receptacle. Plug the banana plug of the test lead into the receptacle on the grounding plug. Connect the alligator clip on the other end of the test lead to a ground point on the bed.
3. Place the static control wrist strap on your wrist. Connect the alligator clip at the other end of the wrist strap cord to a ground point on the bed.

# Troubleshooting Guide

## NOTE

See [page 26](#) through [page 33](#) for an outline of bed PCB's and voltage test points.

PROBLEM/FAILURE	RECOMMENDED ACTION
No power to bed	<p><b>A.</b> Verify the power cord connections at the wall and the bed.</p> <p><b>B.</b> Check circuit breakers, under the litter/gatch section on the patient left side. If the circuit breaker is tripped, reset it by pushing in.</p> <p><b>C.</b> Check for 120 VAC at J1 on the power supply, Pin 1 and 2.</p> <p><b>D.</b> Check for DC voltages on J2 (Pins 1, 2, 3 &amp; 6) on power supply. See <a href="#">page 30</a> for power supply voltage test points.</p> <p><b>a.</b> If voltage is present, check connector W on the CPU board and check for the same DC voltages. If OK, go to step E.</p> <p><b>b.</b> If voltage is not present, unplug connector W on the CPU board and recheck for DC voltages at J2 on the power supply.</p> <p><b>1.</b> If voltages come back, re-connect cable W to the CPU board, and go to step c.</p> <p><b>2.</b> If DC voltage does not come back, replace the power supply.</p> <p><b>c.</b> Unplug all connectors except for F, FF, O, and W from the CPU board and recheck voltages on connector W</p> <p><b>1.</b> If DC voltages come back, plug the cable connections back in until problem comes back, isolate the problem to a component or assembly.</p> <p><b>2.</b> If DC voltages do not come back, replace the CPU board</p> <p><b>E.</b> Check for 120 VAC at connector O on the CPU board.</p> <p><b>a.</b> If voltage is present, replace the CPU board.</p> <p><b>F.</b> Verify bed function and return to service.</p>
No bed down motion.	<p><b>A.</b> Enter diagnostics, (see <a href="#">page 52</a>) and press bed down.</p> <p><b>a.</b> If motion is not present, verify there is a two-pin shunt present on connector Z, closest to the center of the bed, if not, install shunt.</p> <p><b>1.</b> Test bed down motion, if motion is present then go to step D.</p> <p><b>b.</b> If motion is present, re-burn lift potentiometer limits, see <a href="#">page 45</a> for procedure.</p> <p><b>B.</b> Check for 5 VDC on TP 9 (HL) and TP 7 (FL).</p> <p><b>a.</b> If 5 VDC is present, go to step C.</p> <p><b>b.</b> If 5 VDC is not present, replace CPU board.</p> <p><b>C.</b> Check for 120 VAC power on connector N (HL) and G (FL), pin 1 white and pin 3 black, of the CPU board, while pressing bed motion up.</p> <p><b>a.</b> If voltage is not present, replace CPU board.</p> <p><b>b.</b> If voltage is present:</p> <p><b>1.</b> Verify the motors are running, if so, replace lift couplers.</p> <p><b>2.</b> If motors are not running, check voltage at motor connection.</p> <p><b>3.</b> If voltage is present at motor, check capacitors or motors.</p> <p><b>D.</b> Verify bed function and return to service.</p>

# Troubleshooting Guide

PROBLEM/FAILURE	RECOMMENDED ACTION
No bed up motion.	<p><b>A.</b> Enter diagnostics, (see <a href="#">page 52</a>) and press bed up.</p> <ol style="list-style-type: none"> <li>If motion is not present, go to step B.</li> <li>If motion is present, re-burn lift potentiometer limits, see <a href="#">page 45</a> for procedure.</li> </ol> <p><b>B.</b> Check for 5VDC on TP 10 (HL) and TP 8 (FL) on the CPU board</p> <ol style="list-style-type: none"> <li>If 5 VDC is present, go to step C.</li> <li>If 5 VDC is not present, replace CPU board.</li> </ol> <p><b>C.</b> Check for 120 VAC power on connector N (HL) and G (FL), pin 1 white and pin 6 red, of the CPU board while pressing bed motion up.</p> <ol style="list-style-type: none"> <li>If voltage is not present, replace CPU board.</li> <li>If voltage is present <ol style="list-style-type: none"> <li>Verify the motors are running, if so, replace lift couplers.</li> <li>If motors are not running, check voltage at motor connection.</li> <li>If voltage is present at motor, check capacitors or motors.</li> </ol> </li> </ol> <p><b>D.</b> Verify bed function and return to service.</p>
No Gatch down motion.	<p><b>A.</b> Check for 5VDC on TP 5 on the CPU board</p> <ol style="list-style-type: none"> <li>If 5 VDC is present, go to step B.</li> <li>If 5 VDC is not present, replace CPU board.</li> </ol> <p><b>B.</b> Check for 120 VAC power on connector CC, pin 2 (red) and pin 3 (white), of the CPU board while pressing gatch down.</p> <ol style="list-style-type: none"> <li>If voltage is not present, replace the CPU board</li> <li>If 5 VDC is present, check the capacitor and motor.</li> </ol> <p><b>C.</b> Verify bed function and return to service.</p>
No Gatch up motion.	<p><b>A.</b> Check for 5 VDC on TP 6 on the CPU board</p> <ol style="list-style-type: none"> <li>If 5 VDC is present, go to step B.</li> <li>If 5 VDC is not present, replace CPU board.</li> </ol> <p><b>B.</b> Check for 120 VAC on connector CC, pin 1 (black) and pin 3 (white), of the CPU board while pressing gatch up.</p> <ol style="list-style-type: none"> <li>If voltage is not present, replace the CPU board</li> <li>If 5 VDC is present, check the capacitor and motor.</li> </ol> <p><b>C.</b> Verify bed function and return to service.</p>
No Fowler up/or uneven motion.	<p><b>A.</b> Check for 5 VDC on TP 3 on the CPU board</p> <ol style="list-style-type: none"> <li>If 5 VDC is present, go to step B.</li> <li>If 5 VDC is not present, replace CPU board.</li> </ol> <p><b>B.</b> Check for 120 VAC on connector GG, Pin 1 (white) and pin 2 (black), of the CPU board while pressing Fowler up.</p> <ol style="list-style-type: none"> <li>If voltage is not present, replace the CPU board</li> <li>If 5 VDC is present, check the capacitor and motor.</li> </ol> <p><b>C.</b> Refer to Fowler Mechanism Customer Guide (2030-009-028)</p> <p><b>D.</b> Verify bed function and return to service.</p>
No Fowler down/or uneven motion.	<p><b>A.</b> Check for 5VDC on TP4 on the CPU board</p> <ol style="list-style-type: none"> <li>If 5 VDC is present, go to step B.</li> <li>If 5 VDC is not present, replace CPU board.</li> </ol> <p><b>B.</b> Check for 120 VAC on connector GG, Pin 1 (white) and pin 3 (red), of the CPU board while pressing Fowler up.</p> <ol style="list-style-type: none"> <li>If voltage is not present, replace the CPU board</li> <li>If 5 VDC is present, check the capacitor and motor.</li> </ol> <p><b>C.</b> Refer to Fowler Mechanism Customer Guide (2030-009-028)</p> <p><b>D.</b> Verify bed function and return to service.</p>

# Troubleshooting Guide

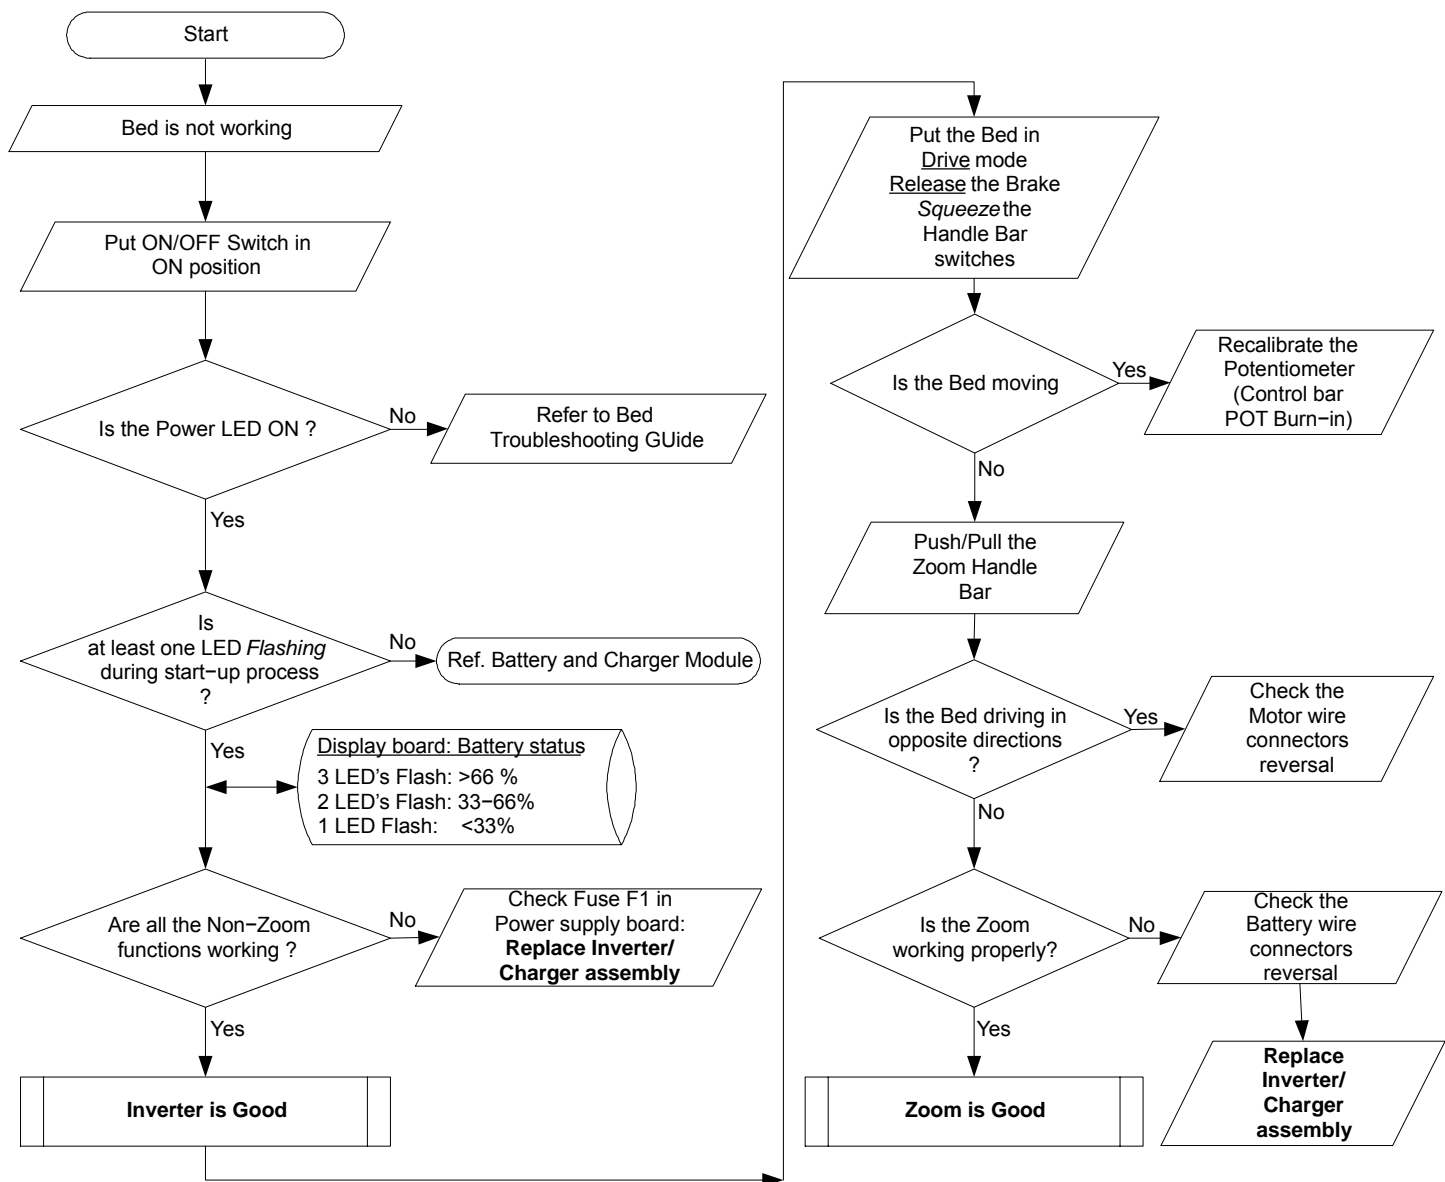

## OPTIONAL EPIC II+ BATTERY BACK-UP TROUBLESHOOTING GUIDE

This section of the troubleshooting guide includes the battery backup functions. When using this guide, assume the bed is functioning properly when powered by the AC line cord with the exception of the battery charging components.

PROBLEM/FAILURE	POSSIBLE CAUSE	RECOMMENDED ACTION
ON/OFF switch is in the on position but the power LED is off and the bed does not function.	No DC voltage from the batteries.	<b>A.</b> Check the circuit breakers at the head end of the bed. <b>B.</b> Verify the battery voltage is greater than 24 VDC. <b>C.</b> Check the battery fuse – replace if necessary (p/n 2040-1-802). <b>D.</b> Check the cable connections from the batteries to the display board. <b>E.</b> Check the ON/OFF switch and cabling.
ON/OFF switch is in the on position, the power LED is on, and the bed does not function.	Display board is not functioning or is locking out all functions.	<b>A.</b> Check the safety switches on the drive bar. <b>B.</b> Verify the battery voltage is greater than 24 VDC. <b>C.</b> Verify the display board is functioning. <b>D.</b> Check all cable connections on the display and power boards.
ON/OFF switch is in the on position, the power LED is on, and the bed does not function.	The thermostat on the inverter/charger board has tripped, indicating a temperature above 110° C (230° F).	<b>A.</b> Wait approximately 3–5 minutes to allow the inverter/charger board to cool down.
The bed power cord is plugged in but the battery does not charge.	The battery charger is not functioning.	<b>A.</b> Check the circuit breakers on the litter. <b>B.</b> Check the battery charger. <b>C.</b> Check all cable connections on the charger.

HDR 4 (E)	+5VDC	Pin 4	Pin 1	+5VDC when AC is Unplugged from the Wall Receptacle

# Electrical System Information

---

## OPTIONAL INVERTER PROTECTION FEATURES

The optional Epic+ inverter has several features to prevent internal damage:

1. Low Battery Voltage – If the battery voltage at the inverter drops below the low voltage cut-off, the inverter will shut off.
2. Over-Temperature – If the inverter gets too hot, it will shut off. The overheating may be caused by high ambient temperature, blocked air flow or an overload condition. When the inverter reaches an acceptable temperature, it will restart.
3. Over-Power – The inverter will source up to its maximum power rating. If the load requires more, the output voltage will shut down. Turning the power switch off and on will reset the inverter. Plugging the bed power cord into the wall socket to charge the battery will reset the inverter.

### **WARNING**

The inverter generates 115VAC, the same as a wall receptacle. To prevent injury, do not put anything into the electrical outlets other than an appliance power cord. Keep the outlets covered when not in use. Do not submerge the unit or subject it to moisture.

## BRAKE PEDAL REPLACEMENT

### Required Tools:

5/16" Hex Allen Wrench

Torque Wrench

Loctite 242

Hammer

Punch

#2 Phillips Screwdriver

Bungee Cords (or Equivalent)

### Procedure:

4. Raise the litter to the full up position.
5. Unplug the bed power cord from the wall socket.
6. Using a #2 Phillips screwdriver, remove the three screws holding both the head end and the foot end upper lift covers. If you want, hold the covers out of the way by using bungee cords (or the equivalent) to secure them to the litter top.
7. Using a 5/16" hex Allen wrench, remove the two bolts holding the brake pedal to the brake rod.
8. Using a hammer and punch, remove the roll pins holding the brake shaft crank to the brake rod on both the head and the foot end.
9. Push the brake rod through the frame until the brake pedal is clear. Remove the brake pedal.
10. Reverse the above steps to attach the new brake pedal.

### NOTE

Use Loctite 242 when reinstalling the bolts and torque the bolts to 25 foot-pounds.

# Service Information

## LIFT MOTOR AND CAPACITOR REMOVAL AND REPLACEMENT

### Required Tools:

3/8" Socket Wrench w/Extension  
Side Cutters

5/16" Socket Wrench  
7/16" Open End Wrench

Floor Jack  
2x4 (or Equivalent)

### Procedure:

#### NOTE

If you need more space to work under the base frame, place a 2x4 across the base frame rails and use a floor jack to raise the base frame off the floor.

1. Unplug the bed power cord from the wall socket. Using a 5/16" socket wrench, remove the five bolts holding the lower lift cover to the base and remove the cover.
2. Disconnect the two connectors (A) at the motor capacitor.
3. Disconnect the white connector (B) from the power cord.
4. Using side cutters, cut the cable ties holding the capacitor (C) to the base and remove the capacitor.
5. Using a 3/8" socket wrench, remove the four screws (D) holding the motor assembly in the lift housing and remove the motor assembly.
6. Reverse the above steps to install the new motor.

#### NOTE

The drive shaft on the new motor probably will have to be turned to be aligned with the coupler. Use a 7/16" open end wrench to turn the drive shaft of the motor.

The procedure for lift motor and capacitor removal and replacement is the same for both ends of the bed.

# Service Information

---

## LIFT HOUSING REMOVAL AND REPLACEMENT

### Required Tools:

#2 Phillips Screwdriver	Bungee Cord (or Equivalent)	5/16" Socket Wrench
Side Cutters	9/16" Socket Wrench	Floor Jack
7/32" Hex Allen Socket Wrench	Sawhorses (or Equivalent)	2x4 (or Equivalent)
3/8" Socket Wrench (w/ 6" extension)		

### Procedure:

#### NOTE

If you need more space to work under the base frame, place a 2x4 across the base frame rails and use a floor jack to raise the base frame off the floor.

1. Unplug the bed power cord from the wall socket.
2. Using a 5/16" socket wrench, remove the five bolts holding the lower lift cover to the base and remove the cover.
3. Using a #2 Phillips screwdriver, remove the three screws holding the upper lift cover to the base. If you want, hold the covers out of the way by using bungee cords (or the equivalent) to secure them to the litter top.
4. Remove the lift motor and capacitor (refer to procedure on [page 41](#)).
5. Remove lift potentiometer (refer to procedure on [page 44](#)).
6. Using a 5/16" socket wrench, remove the cable clamps holding the power and sensor coil cords on top of the lift housing assembly. Cut the cable ties and disconnect the coil cords from under the lift housing. The power and sensor coil cords are now free of the lift housing assembly. Drape them up out of the way.
7. Using a 7/32" hex Allen socket, remove the two screws holding the lift screws to the header crossbar plate.
8. Lift the litter top up and support it about 6" above the lift screws with sawhorses or the equivalent.

# Service Information

---

## LIFT HOUSING REMOVAL AND REPLACEMENT (CONTINUED)

FOOT END – BOTTOM VIEW

9. Under the base, using a 9/16" socket, remove the four nuts (A) holding the lift housing to the base.
10. Lift up and out on the lift housing assembly to remove it from the base.

### CAUTION

To ensure proper reattachment of the power and sensor coil cords, refer to the procedure on [page 47](#). Refer to the procedure on [page 44](#) for reattachment of the lift potentiometer.

11. Reverse the above steps to reinstall the lift housing assembly after service is completed.

### NOTE

The procedure for lift housing removal and replacement is the same for both ends of the bed.

# Service Information

---

## LIFT POTENTIOMETER REPLACEMENT AND ADJUSTMENT

### Required Tools:

#2 Phillips Screwdriver  
3/8" Open End Wrench

Bungee Cord (or equivalent)  
Side Cutters

5/16" Socket Wrench

### Procedure:

1. Raise the litter to the full up position.
2. Unplug the bed power cord from the wall socket.
3. Using a 5/16" socket wrench, remove the five bolts holding the lower lift cover to the base and remove the cover.
4. Using a #2 Phillips screwdriver, remove the three screws holding the upper lift cover to the base. If you want, hold the covers out of the way by using bungee cords (or the equivalent) to secure them to the litter top.
5. Using side cutters, cut the cable tie (A) holding the pot cable to the coil cord.
6. Unplug the pot cable from the sensor coil cord. If replacing a pot at the head end of the bed, unplug the cables attached to the brake sensor switch.
7. Pull the pot cable up through the base.
8. Using a 3/8" open end wrench, remove the two bolts (B) holding the pot housing (C) to the lift housing.

# Service Information

---

## LIFT POTENTIOMETER REPLACEMENT AND ADJUSTMENT (CONTINUED)

9. Lift up and out on the pot housing assembly to remove it from the lift housing.
10. Before installing the new pot on the bed, turn it clockwise until it stops. Turn it back counterclockwise two full (360°) revolutions. This allows a "window" position for proper upper and lower limits.
11. Reverse steps 4–8 to install the new pot and pot housing assembly.
12. After installing the new pot, the "burn-in" procedure must be followed.

### NOTE

Be sure to maintain the pot position while installing.

## LIFT POTENTIOMETER "BURN-IN" PROCEDURE

### NOTE

It requires **two people** to enable the diagnostics mode for the bed.

1. Unplug the bed power cord from the wall socket.
2. On the foot board control panel, hold down the bed motion lock button and the button to lock out the siderail controls for the knee. While still holding the buttons, plug the bed power cord into the wall socket. Release the foot board buttons. The siderail control lights LED should be flashing to indicate the bed is in diagnostics mode.
3. To "burn in" the Bed Up/Down limits, raise the bed completely up until it can't go any farther. Press and hold the "Bed Motion Lock" button. The "Bed Motion Lock" LED will light. Continue to hold the "Bed Motion Lock" button until the "Bed Motion Lock" LED flashes. The flashing LED indicates the limits have been set. Release the "Bed Motion Lock" button and unplug the power cord from the wall socket to complete the "burn in" mode.
4. Plug the power cord into the wall socket and verify the lift limits are set properly before returning the bed to service.
5. If your bed has an IV Caddy, a lower limit must be burned in. Run the litter down to 19.5 inches. Hold the Bed Up/Down Lock button until the light flashes.

### CAUTION

Do not run the litter all the way down while in the diagnostics mode. Damage to the bottom lift covers could result.

# Service Information

---

## LIFT MOTOR COUPLER REPLACEMENT

### Required Tools:

5/16" Socket Wrench  
2x4 (or Equivalent)

3/8" Socket Wrench (w/6" Extension)

Floor Jack

### Procedure:

#### NOTE

If you need more space to work under the base frame, place a 2x4 across the base frame rails and use a floor jack to raise the base frame off the floor.

1. Unplug the bed power cord from the wall socket.
2. Using a 5/16" socket wrench, remove the five bolts holding the lower lift cover to the base and remove the cover.
3. Using a 3/8" socket with an extension, remove the four bolts (A) holding the isolation plate (B) to the lift housing and lower the lift motor and isolation plate assembly to allow access to the coupler (C).
4. The motor coupler can now be removed from the lift housing.
5. Reverse the above steps to install the new motor coupler and bushings.

# Service Information

---

## POWER AND SENSOR COIL CORD REPLACEMENT

### Required Tools:

#2 Phillips Screwdriver	Side Cutters	5/16" Socket Wrench
Bungee Cord (or equivalent)	5/16" Nut Driver	Floor Jack
2x4 (or Equivalent)		

### Procedure:

#### NOTE

If you need more space to work under the base frame, place a 2x4 across the base frame rails and use a floor jack to raise the base frame off the floor.

1. Unplug the bed power cord from the wall socket.
2. Using a 5/16" socket wrench, remove the five bolts holding the lower lift cover to the base and remove the cover.
3. Using a #2 Phillips screwdriver, remove the three screws holding the upper lift cover to the base. If you want, hold the covers out of the way by using bungee cords (or the equivalent) to secure them to the litter top.
4. Using side cutters, cut the cable ties holding the power and sensor coil cords to the base. Remove the ground wire coming from the sensor cord that is attached to the base (note the star washer arrangement).
5. Disconnect the cables going to the motor and the lift potentiometer (at the head end, the sensor cord is also attached to the brake switch sensor).
6. Pull both cords up through the frame of the bed and the lift housing.
7. Using a 5/16" socket wrench, remove the two screws (A) holding the cable clamps\* to the top of the lift housing.
8. Using a 5/16" socket wrench, remove the two screws (B) securing the cable clamps\* to the underside of the header crossbar assembly.
9. Pull both coil cords up through the header crossbar assembly.
10. Disconnect the power and sensor coil cords from the connectors.
11. The cords should now be completely removed from the bed. Reverse the above steps to install the new power and sensor cords.\*

### CAUTION

\* When replacing the power and sensor coil cords, secure the cable clamps to the cords at the first coil both on the top and on the bottom to ensure there is not too much slack in the cords between the top of the lift housing assembly and the bottom of the header crossbar. Be sure the clamps are fastened at exactly the correct angle, as shown by the arrows in the illustration. Arrange the cords exactly as shown in the illustration (left in front of right). **If this is not done correctly, damage to the cords will result.**

## Service Information

VIEW FROM CENTER OF BED

# Service Information

## OPTIONAL BATTERY REMOVAL AND REPLACEMENT

### Required Tools:

Torx T27	7/16" Wrench
1/2" Socket Wrench	Bungee Cords
Phillips Screwdriver	
5/32" Allen Wrench	

### Procedure:

1. Raise the litter to full up. Unplug the power cord from the wall socket and push the battery power on/off switch to the "OFF" position.
2. Using a Phillips screwdriver, remove the four screws holding the base hood to the base frame.
3. Lift the base hood and support it from the litter frame using bungee cords or the equivalent.
4. Properly ground yourself (see [page 20](#) for static discharge precautions).
5. Open the cable clamp at the head end, left side of the base frame and remove the cables from the clamp.
6. Using a Torx T27, remove the four screws (A) holding the electronics box cover and remove the cover.
7. Disconnect the two battery cables (B).

### WARNING

The battery tray assembly weighs 50 pounds. Use caution when removing the two hex head screws securing it to the base frame or personal injury could result. Battery posts, terminals and related accessories contain lead and lead compounds, chemicals known to the State of California to cause cancer and birth defects or other reproductive harm. **Wash hands after handling.** Properly dispose of the old battery in accordance with local regulations.

8. Support the battery tray assembly from the bottom. Using a 7/16" hex socket or wrench, remove the two screws (C) supporting the battery tray.

# Service Information

---

## OPTIONAL BATTERY REMOVAL AND REPLACEMENT (CONTINUED)

9. The back of the battery tray assembly has a lip which catches on the electronics box. Lift up and out to remove the battery tray assembly.
10. Using a Phillips screwdriver, remove the two screws holding the battery terminal to the battery tray assembly.
11. Using a 5/32" Allen wrench and a 7/16" wrench, remove the four screws and nuts holding the battery harness to the battery terminals.
12. Reverse steps 1 – 11 to install the new batteries. Complete the last four items of the set-up procedures on [page 8](#).

# Service Information

---

## SCALE SYSTEM DIAGNOSTICS AND CALIBRATION

### Diagnostic Mode Functions:

1. ANGLE CALIBRATE – This may be required in the field to recalibrate the scale. Calibrate using 50 pounds.
2. DISP. CORNER LBS – This function displays the individual corner weights in **pounds** for each load cell and can be used to isolate a defective load cell.
3. DISP. CORNER CTS – This function displays the individual corner weights in **counts** for each load cell and can be used to isolate a defective load cell.
4. DISPLAY FACTORS – This function is used to see the scale calibration factors. This can be used to diagnose a bad scale calibration.
5. DISPLAY AVERAGES – This function is used to see the average weight in pounds each load cell has experienced.
6. DISPLAY MAXIMUMS – This function is used to see the maximum weight each load cell has experienced.
7. CLEAR STATISTICS – This function is used to clear the averages and maximums.
8. INIT TO DEFAULTS – This function is used to reset the scale factors back to defaults.
9. VIEW ERROR LOG – This function can be used to see a log of scale errors and the time they occurred.
10. LOCK/UNLOCK LBS/KG – This function can be used to lock out the ability to change weight units.
11. PICK EXIT ALARM – This function can be used to select a different bed exit alarm tone.
12. BRAKE ALARM OFF/ON – This function can be used to enable or disable an audible alarm when the brakes are not set. Not available for beds with Zoom or Battery Backup.
13. DEFAULT ANGLE – This function can be used to select the default angle displayed to either fowler or trend.
14. SOFTWARE CONFIG – This function can be used to see what the bed configuration is.
15. SOFTWARE VERSION – This function can be used to see what software version it is.
16. CALIBRATE SCALE – This is the old scale calibration routine with 200 pounds. Only there for backup purposes.
17. EXIT DIAGNOSTIC – This function will give you the ability to exit the diagnostic mode and go into scale mode.

### Diagnostic Mode:

#### NOTE

It requires **two people** to enable the diagnostic mode for the scale system.

1. To enter diagnostic mode, unplug the bed's power cord from the wall socket.
2. Press and **hold down** the LBS/KGS button.
3. While still holding the LBS/KGS button, plug the bed's power cord into the wall socket.
4. After two seconds, release the LBS/KGS button. The LCD should display "ANGLE CALIBRA TE". The diagnostic mode is now active.

# Service Information

---

## SCALE SYSTEM DIAGNOSTICS AND CALIBRATION (CONTINUED)

### Displaying Individual Load Cell Outputs:

A defective load cell can be detected by entering diagnostics and displaying individual load cell outputs.

1. Enter the diagnostic mode. The LCD will display "ANGLE CALIBRATE" when the diagnostic mode is activated.
2. Repeatedly press and release the up or down arrow button (ZERO or SCALE ON/OFF) until the LCD displays "DISPLAY CORNER CTS".
3. Press and release the ENTER button (LBS/KGS). The LCD should display " $\wedge \vee$  SELECT CORNER".

The two buttons listed below function as POSITION buttons to select the four corners of the bed's litter. Whenever the LCD displays " $\wedge \vee$  SELECT CORNER", press one of these buttons to cycle through the corners and to select the load cell assembly at the desired corner.

A. ZERO = cycle up through the four corners

B. SCALE ON/OFF = cycle down through the four corners

4. Press and release the position button that corresponds with the load cell to be checked. The LCD should display "X/X=NNN.N". "X/X" represents the initials of the selected corner, i.e. H/R will be displayed for the patient's head end, right side. "NNN.N" represents the resistance of the load cell.
5. Repeat step four for each corner. Head end weight readings will normally be lower than foot end weights. Weight readings should be constant. A drifting 000.0 or 999.9 weight, or a reading that does not change when weight is applied to that corner of the bed indicates a problem with the selected load cell assembly or load cell cable.

### Verifying Scale Accuracy:

1. Zero the empty bed. Place a known weight on the center of the bed; the heavier the better and no less than 100 pounds. The displayed weight should be  $\pm 1\%$  of the actual weight.
2. If the displayed weight is not accurate, remove the weight from the bed and proceed to the Scale Calibration section.

### Scale Calibration:

#### NOTE

It requires **two people** to enable the calibration mode for the scale system.

Raise the siderails when calibrating the scale to avoid getting inaccurate scale readings due to possible interference between the siderails and the casters.

Calibrate the scale system with a known 50 pound weight. If exactly 50 pounds is not available, the factory default for calibration will have to be changed as described in step 6.

1. To enter the calibration mode, unplug the bed's power cord from the wall socket.
2. Press and **hold down** the LBS/KGS button.
3. While still holding the LBS/KGS button, plug the bed's power cord into the wall socket.
4. After two seconds, release the LBS/KGS button. The LCD should read "ANGLE CALIBRATE". The calibration mode is now active.
5. Press and hold the ENTER button (LBS/KGS). Zero the bed, following the displayed instructions. When the bed is zeroed, the LCD should display "REF X100=<0>5000". This is the factory default for 50 pounds. If 50 pounds will be used to calibrate the scale, proceed to step 7.

# Service Information

---

## SCALE SYSTEM DIAGNOSTICS AND CALIBRATION (CONTINUED)

### Scale Calibration (Continued):

6. If exactly 50 pounds is not available, change the display to match the weight you are using. Pressing the CHANGE EQUIP button will move the cursor position to the right. Pressing the up arrow (ZERO) button will increase the numbers. Pressing the down arrow (SCALE ON/OFF) button will decrease the numbers. Scroll through the numbers until they match the weight you will use for calibration.
7. Place the 50 pound calibrated weight in the center of the bed. Press and release the ENTER button and the LCD will display "PRESS REV. TREND". Press and hold the button with the Reverse Trendelenburg symbol (feet down/head up) until the bed stops. Release the button and the LCD will display "DO NOT TOUCH BED". Press and hold the Reverse Trendelenburg button again until the bed stops. Release the button and the LCD will display "DO NOT TOUCH BED".
8. The LCD will display "PRESS TREND." Press and hold the button with the Trendelenburg symbol (feet up/head down) until the bed stops. Release the button and the LCD will display "DO NOT TOUCH BED". Press and hold the Trend button again until the bed stops. Release the button and the LCD will display "DO NOT TOUCH BED".
9. Repeat steps 5 – 8 with 200 pounds.
10. The LCD will display the weight. This indicates the calibration procedure is complete.
11. Level the bed at a full up or full down position. Remove the weight and zero the bed.
12. Verify scale accuracy and functionality before returning the bed to service.

# Service Information

---

## LOAD CELL REPLACEMENT

### Required Tools:

9/16" Socket Wrench  
Wire Cutters

9/16" Open End Wrench

Saw Horse (or Equivalent)

### Replacement Procedure:

1. Raise the Fowler or knee section, depending which end of the litter needs service.
2. Unplug the load cell connector from the load cell cable.
3. Using wire cutters, remove the wire ties holding the cable to the frame.
4. Using a 9/16" socket and a 9/16" open end wrench, remove the two bolts holding the load cell to the litter cross tube and remove the load cell.
5. Using a saw horse, support the litter at the end where the load cell was removed. Reverse the above procedure to install the new load cell.

### NOTE

Scale calibration procedure must be performed after the load cell is replaced (see [page 52](#)).

## HEAD END MOTOR REMOVAL AND REPLACEMENT

### Required Tools:

T27 Torx  
Wire Cutters

7/16" Socket Wrench

3/8" Socket Wrench

### Procedure:

1. Run the litter to the full up position and remove the mattress from the bed.
2. Fold the foot section back toward the head end of the bed. Electrically run the knee section to full up. If the knee section will not move electrically, pull the foot section toward the head end of the bed while pulling the CPR release handle (located at the head end of the bed). The knee section will raise.
3. Using a T27 torx, remove the four screws holding the cover to the actuator box and remove the cover.
4. Remove the two CPR release cables from the CPR release bracket. Using a 3/8" socket wrench underneath the actuator box, remove the two bolts holding the release bracket to the actuator box and remove the bracket from the actuator box.
5. Disconnect all the electrical connections going to the head motor and move aside any wiring that could interfere with the removal of the motor.
6. Using a 3/8" socket wrench underneath the actuator box, remove the four bolts holding the motor mounting bracket to the actuator box. Lift up and out on the motor to remove it.
7. Remove the motor mounting bracket from the old motor and install it on the replacement motor.
8. Reverse steps 3 through 6 to install the replacement motor.
9. Verify the bed is working properly before returning it to service.

# Service Information

---

## KNEE MOTOR REMOVAL AND REPLACEMENT

### Required Tools:

T27 Torx

7/16" Socket Wrench

3/8" Socket Wrench

Wire Cutters

### Procedure:

1. Run the litter to the full up position and remove the mattress from the bed.
2. Fold the foot section back toward the head end of the bed. Electrically run the knee section to full up. If the knee section will not move electrically, pull the foot section toward the head end of the bed while pulling the CPR release handle (located at the head end of the bed). The knee section will raise.
3. Using a 7/16" socket wrench, remove the mounting bolt on the litter for the knee dampening cylinder. This leaves the knee dampener mounted only to the seat panel.
4. Using a T27 torx, remove the four screws holding the cover to the actuator box and remove the cover.
5. Remove the two CPR release cables from the CPR release bracket. Using a 3/8" socket wrench underneath the actuator box, remove the two bolts holding the release bracket to the actuator box and remove the bracket from the actuator box.
6. Disconnect all the electrical connections going to the knee motor and move aside any wiring that could interfere with the removal of the motor.
7. Pull the foot panel toward the head end of the bed. This causes the knee motor linkage to roll past center and allows the motor to be removed without supporting the knee section.
8. Using a 3/8" socket wrench underneath the actuator box, remove the four bolts holding the motor mounting bracket to the actuator box. Lift up and out on the motor to remove it.
9. Remove the motor mounting bracket from the old motor and install it on the replacement motor.
10. Install the replacement motor.
11. Reverse step 3 – 5 to reinstall the knee dampener, CPR bracket and actuator box cover.
12. Pull the foot panel toward the foot end of the bed. This causes the knee motor linkage to roll back past center. If this step is not done, damage to the motor or linkage will occur.
13. Verify the bed is working properly before returning it to service.

# Service Information

---

## POWER SUPPLY REMOVAL AND REPLACEMENT

### Required Tools:

T27 Torx

Needle-Nose Pliers

### Procedure:

1. Run the litter to the full up position and remove the mattress from the bed.
2. Fold the foot section back toward the head end of the bed. Electrically run the knee section to full up. If the knee section will not move electrically, pull the foot section toward the head end of the bed while pulling the CPR release handle (located at the head end of the bed). The knee section will raise.
3. Using a T27 torx, remove the four screws holding the cover to the actuator box and remove the cover.
4. Properly ground yourself (see [page 20](#)).
5. Unplug all electrical connections from the power supply.
6. Using needle-nose pliers, squeeze the four stand-offs supporting the power supply and pull up gently on the power supply to remove it.
7. Reverse steps 2 through 5 to install the new power supply.
8. Verify the bed is working properly before returning it to service.

## CPU BOARD REMOVAL AND REPLACEMENT

### Required Tools:

T27 Torx

Needle-Nose Pliers

### Replacement Procedure:

1. Run the litter to the full up position and remove the mattress from the bed.
2. Fold the foot section back toward the head end of the bed. Electrically run the knee section to full up. If the knee section will not move electrically, pull the foot section toward the head end of the bed while pulling the CPR release handle (located at the head end of the bed). The knee section will raise.
3. Using a T27 torx, remove the four screws holding the cover to the actuator box and remove the cover.
4. Properly ground yourself (see [page 20](#)).
5. Unplug all electrical connections from the CPU board.
6. Press the six stand-offs away from the board while gently lifting the board up and out.
7. Install the replacement CPU board.

### NOTE

After the replacement CPU board is installed, a “burn-in” procedure must be performed for the Fowler and lift motor potentiometers (see [page 45](#) and [page 58](#)).  
If the bed is equipped with a scale system, the scale calibration procedure must also be performed after the replacement CPU board is installed (see [page 52](#)).

# Service Information

---

## FOWLER POTENTIOMETER REPLACEMENT

### Required Tools:

T27 Torx

Wire Cutters

1/2" Open End Wrench

7/64" Allen Wrench

### Replacement Procedure:

1. Manually crank the knee section up until it stops.
2. Using a T27 Torx, remove the four screws holding the litter access cover to the litter and remove the cover.
3. Using a 7/64" Allen wrench, loosen the screw holding the linkage to the pot. shaft and remove the linkage from the shaft.
4. Using a 1/2" open end wrench, remove the nut holding the potentiometer to the frame.
5. Using wire cutters, remove the cable ties from the cable. Unplug the cable from the CPU and remove the pot.
6. Reverse the above procedure to install the replacement potentiometer.
7. The new potentiometer must be calibrated after it has been installed.
8. The Fowler pot. should be set at 150 ohms ( $\pm$  10 ohms) in the full down position. This reading must be taken from pins 3 and 4 on the connector with the pot. unplugged from the board. After the correct ohm reading is achieved, tighten the screw on the linkage.
9. Unplug the bed power cord from the wall socket.
10. Press and hold the "Knee Lockout" and "Bed Motion Lock" buttons on the foot board.
11. Plug the power cord into the wall socket. Release the two buttons and the "Knee Lockout" LED should be flashing. This indicates the bed is in the correct calibration mode.
12. Using the foot board controls, run the Fowler up to 90°. Press and hold the button on the foot board to lock out the siderail controls for the back until the padlock LED flashes. Release the button.
13. Using the foot board controls, run the Fowler down to 0°. Press and hold the button on the foot board to lock out the siderail controls for the knee until the padlock LED flashes. Release the button and unplug the bed power cord to complete the "burn in" mode.
14. Plug the bed power cord into the wall socket and verify the back limits are set properly before returning the bed to service.

## FOWLER POTENTIOMETER “BURN-IN” PROCEDURE

### NOTE

It requires **two people** to enable the diagnostics mode for the bed.

1. Unplug the bed power cord from the wall socket.
2. On the foot board control panel, hold down the bed motion lock button and the button to lock out the side-rail controls for the knee. While still holding the buttons, plug the bed power cord into the wall socket. Release the foot board buttons. The siderail control lights LED should be flashing to indicate the bed is in diagnostics mode.
3. Using the foot board controls, run the Fowler up to 90°. Press and hold the button on the foot board to lock out the siderail controls for the back until the padlock LED flashes. Release the button.
4. Using the foot board controls, run the Fowler down to 0°. Press and hold the button on the foot board to lock out the siderail controls for the knee until the padlock LED flashes. Release the button..

# Service Information

## OPTIONAL SMART TV INTERFACE “BURN-IN” PROCEDURE

This procedure is used for selecting the style of TV interface needed for your bed. If traditional TV is desired, no calibration is required. If optional Smart TV is available on the bed, select one of the TV manufacturers listed in the table below.

### SET-UP

- Ensure the communication cable is connected between the bed and the Db37 wall port or the pillow speaker port of the nurse call system. If available, a bed communication tester can be used instead of the hospital wiring.

### PROCEDURE

1. Place the bed in the lift potentiometer burn-in mode (see [page 45](#)).
2. Notice the Nurse Call LED (yellow) is flashing. Notice the Nurse Answer LED (green) is flashing on/off slowly.
3. Press and release the TV ON/OFF switch on the bed's siderail once. Notice the Nurse Call LED flashes once. This is the first selection of TV manufacturers for the Smart TV mode. Notice the Nurse Answer LED (green) is flashing on/off slowly. The Nurse Answer LED will only light when the Nurse Call LED (yellow) is flashing.
4. Press and release the TV ON/OFF switch on the bed's siderail to scroll to other TV manufacturers. Notice the number of times the Nurse Call LED flashes matches the number listed in the table below and represents the TV manufacturer selected.
5. When the desired TV manufacturer has been selected, unplug the bed power cord from the wall socket and plug it back in to complete the Smart TV burn-in procedure.

### NOTE

If the bed is connected to a television during the burn-in procedure, the television will turn on when the correct setting is selected.

TV MANUFACTURER SELECTION FOR SMART TV BURN-IN PROCEDURE		
Press and release TV ON/OFF switch:	Nurse Call LED (Yellow)	TV Manufacturer
One time	One flash	RCA 1
Two times	Two flashes	RCA 2
Three times	Three flashes	Zenith 1
Four times	Four flashes	Zenith 2
Five times	Five flashes	Phillips/Magnavox
Six times	Six flashes	Magnavox (models 9120, 9220, 9320)
Seven times	Seven flashes	Traditional Plus
Eight times	Eight flashes	Traditional TV
Nine times	Nine flashes	Auto Detect: Smart TV
Ten times	Ten flashes	Auto Detect w/ Digital Volume Smart TV

## EPIC+ OPTION AC CROSSOVER BOARD REPLACEMENT

### Required Tools:

T27 Torx

Wire Cutters

5/16" Nut Driver

1/2" Box End Wrench

Small Flat Blade Screwdriver

#2 Phillips Screwdriver

Needle Nose Pliers

### Replacement Procedure:

1. Raise the litter and the head end to the full up position.
2. Remove the head board from the bed.
3. Unplug the power cord from the wall socket and push the battery power on/off switch to the "OFF" position.
4. Using a 5/16" nut driver, remove the screw (A) holding the power cord clamp to the bumper weldment and remove the clamp from the bumper.

**FIGURE 1**

# Service Information

---

## EPIC+ OPTION AC CROSSOVER BOARD REPLACEMENT (CONTINUED)

5. Using a T27 Torx, remove the four bolts (C) at the head end of the bed holding the control bar mounting bracket to the head end (see Figure 2).
6. Using a #2 Phillips screwdriver, remove the three screws (D) holding the control bar cover to the head end of the bed (see Figure 3).

FIGURE 2

FIGURE 3

7. Using a T-27 Torx, remove the 2 bolts holding the AC crossover board cover to the head end frame and remove the cover.
8. Disconnect all wires from the AC crossover board.
9. Using needle nose pliers, release the four mounting stand-offs from the board and remove the board.
10. Reverse steps 9 – 12 to install the new board.
11. Reverse steps 1 – 8 of the control bar potentiometer replacement procedure on 61 to reassemble the bed.

# Service Information

---

## EPIC+ OPTION DISPLAY/CPU BOARD REPLACEMENT

### Required Tools:

T27 Torx

1/2" Box End Wrench

#2 Phillips Screwdriver

Wire Cutters

Small Flat Blade Screwdriver

Needle Nose Pliers

5/16" Nut Driver

### Replacement Procedure:

1. Follow steps 1 – 8 of the AC Crossover Board replacement procedure on [page 60 & 61](#).
2. Disconnect all wires from the display/CPU board.
3. Using a #2 Phillips screwdriver, remove the six screws holding the display/CPU board to the control bar cover and remove the board.
4. Reverse steps 2 & 3 to install the new board.
5. Reverse steps 1 – 8 of the AC Crossover Board replacement procedure on [page 60 & 61](#) to reassemble the bed.

# Service Information

---

## HEAD AND FOOT SIDERAIL COVER REMOVAL

### Required Tools:

#2 Phillips Screwdriver

### Removal Procedure:

1. Unplug the power cord from the wall receptacle.
2. Using a #2 Phillips screwdriver, remove the 8 phillips screws (A) holding the covers (B) to the siderail.

### CAUTION

There are two cables connecting the outside cover to the head end siderail. Be careful not to pull on them when removing the cover.

3. Remove the cables from the siderail. Make note of the proper location for the cables.
4. Reverse the above steps to reattach the cover.

### CAUTION

Do not snag the cables when installing the siderail cover.

### NOTE

Follow the same procedure for siderail cover removal for the foot end rails.

# Service Information

---

## HEAD AND FOOT MOLDED SIDERAIL REPLACEMENT

### Required Tools:

#2 Phillips Screwdriver

3/8" Nut Driver

### Procedure:

1. Unplug the bed power cord from the wall socket.
2. Remove the siderail cover (see [page 63](#)).
3. Using a 3/8" nut driver, remove the four screws (A) holding the molded rail (B) to the siderail support assembly.

### NOTE

Note the location of the spacers (C) for re-assembly purposes.

4. Pull up on the molded rail (B) to remove it from the siderail assembly.
5. Reverse the above steps to install the new molded rail.

# Service Information

## HEAD END SIDERAIL CABLE REPLACEMENT

### Required Tools:

#2 Phillips Screwdriver

Side Cutters

### Procedure:

1. Run the head section fully up.
2. Unplug the bed power cord from the wall socket.
3. Using a #2 Phillips screwdriver, remove the eight screws holding the siderail cover and remove the cover.
4. Put the siderail in the down position.
5. Remove the cover to expose the siderail cables.

# Service Information

---

## HEAD END SIDERAIL CABLE REPLACEMENT (CONTINUED)

6. Using side cutters, clip the cable ties (A) holding the cables together.
7. Using a #2 Phillips screwdriver, remove the cable clamp (C) from the siderail.
8. Disconnect cable (B) from the circuit board and cable (D) from the speaker.

### NOTE

The speaker and nurse call are optional equipment and may not be in the siderail as shown.

9. Pull the cables through the siderail (toward the center of the bed).
10. Unplug the cable assembly underneath the head section.
11. Reverse the above steps to install the new cable.

### CAUTION

Be sure to position the cables on both sides of the pivot arm, as shown in the illustration on [page 65](#), before reattaching the pivot arm cover. If not done properly, the cover will not fit tightly and damage could occur to the cables.

# Service Information

## FOOT BOARD HINGE REMOVAL

### Required Tools:

#2 Phillips Screwdriver

### Procedure:

1. Using a #2 Phillips screwdriver, remove the screws (A & B) holding the door and hinge assembly to the foot board.
2. If replacing the hinge only, use a Phillips screwdriver to remove the screws holding the hinge to the door.
3. Reverse the above steps to attach the replacement door and/or hinge.

### NOTE

Screw (B) is a machine screw and must be reinstalled in the proper hole.

# Service Information

## FOOT BOARD MODULE REPLACEMENT

### Required Tools:

#2 Phillips Screwdriver

### Procedure:

1. Unplug the bed power cord from the wall socket. Remove the foot board hinge (see above).

### NOTE

Regardless of which module is being replaced, the farthest module to the right must be removed first.

2. Pull the module out of the foot board and disconnect the cable from the module (A).
3. Reverse the above steps to install the new module.

### CAUTION

The modules must be overlapped as shown in the illustration to prevent fluids from entering the board cavity and causing damage.

# Service Information

---

## FOOT BOARD INTERFACE PLUG REPLACEMENT

### Required Tools:

#2 Phillips Screwdriver

BOTTOM VIEW OF FOOT BOARD

### Procedure:

1. Unplug the bed power cord from the wall socket.
2. Remove the foot board from the bed to access the bottom of the board.
3. Properly ground yourself (see [page 20](#) for static discharge precautions).
4. Using a #2 Phillips screwdriver, remove the eight screws holding the foot board door to the foot board and remove the door.
5. Using a #2 Phillips screwdriver, remove the two screws (A) holding the plug to the foot board.
6. Disconnect the cable from the foot board module cable. Note proper placement of the cable so it will be reconnected properly.
7. Reverse the above steps to install the new interface plug.

---

### CAUTION

Be sure to install the plug with the flat edge (B) at the top left, as shown in the illustration, or the foot board interface plug will not mate properly with the bed and damage to the plug or foot board could result.

# Warranty

---

## Limited Warranty:

Stryker Medical Division, a division of Stryker Corporation, warrants to the original purchaser that its products should be free from defects in material and workmanship for a period of one (1) year after date of delivery. Stryker's obligation under this warranty is expressly limited to supplying replacement parts and labor for, or replacing, at its option, any product which is, in the sole discretion of Stryker, found to be defective. Stryker warrants to the original purchaser that the frame and welds on its beds will be free from structural defects for as long as the original purchaser owns the bed. If requested by Stryker, products or parts for which a warranty claim is made shall be returned prepaid to Stryker's factory. Any improper use or any alteration or repair by others in such manner as in Stryker's judgement affects the product materially and adversely shall void this warranty. Any repair of Stryker products using parts not provided or authorized by Stryker shall void this warranty. No employee or representative of Stryker is authorized to change this warranty in any way.

Stryker Medical beds are designed for a 15 year expected life under normal use conditions and appropriate periodic maintenance as described in the maintenance manual for each device.

This statement constitutes Stryker's entire warranty with respect to the aforesaid equipment. STRYKER MAKES NO OTHER WARRANTY OR REPRESENTATION, EITHER EXPRESSED OR IMPLIED, EXCEPT AS SET FORTH HEREIN. THERE IS NO WARRANTY OF MERCHANTABILITY AND THERE ARE NO WARRANTIES OF FITNESS FOR ANY PARTICULAR PURPOSE. IN NO EVENT SHALL STRYKER BE LIABLE HEREUNDER FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING FROM OR IN ANY MANNER RELATED TO SALES OR USE OF ANY SUCH EQUIPMENT.

## To Obtain Parts and Service:

Stryker products are supported by a nationwide network of dedicated Stryker Field Service Representatives. These representatives are factory trained, available locally, and carry a substantial spare parts inventory to minimize repair time. Simply call your local representative, or call Stryker Customer Service at (800) 327-0770.

## Service Contract Coverage:

Stryker has developed a comprehensive program of service contract options designed to keep your equipment operating at peak performance at the same time it eliminates unexpected costs. We recommend that these programs be activated *before* the expiration of the new product warranty to eliminate the potential of additional equipment upgrade charges.

## **A SERVICE CONTRACT HELPS TO:**

- Ensure equipment reliability
- Stabilize maintenance budgets
- Diminish downtime
- Establish documentation for JCAHO
- Increase product life
- Enhance trade-in value
- Address risk management and safety

# Warranty

**For more information on our service contracts,  
please call your local representative or call (800) 327-0770 (option #2).**

## **Return Authorization:**

Merchandise cannot be returned without approval from the Stryker Customer Service Department. An authorization number will be provided which must be printed on the returned merchandise. Stryker reserves the right to charge shipping and restocking fees on returned items.

**SPECIAL, MODIFIED, OR DISCONTINUED ITEMS NOT SUBJECT TO RETURN.**

## **Damaged Merchandise:**

ICC Regulations require that claims for damaged merchandise must be made with the carrier within fifteen (15) days of receipt of merchandise. **DO NOT ACCEPT DAMAGED SHIPMENTS UNLESS SUCH DAMAGE IS NOTED ON THE DELIVERY RECEIPT AT THE TIME OF RECEIPT.** Upon prompt notification, Stryker will file a freight claim with the appropriate carrier for damages incurred. Claim will be limited in amount to the actual replacement cost. In the event that this information is not received by Stryker within the fifteen (15) day period following the delivery of the merchandise, or the damage was not noted on the delivery receipt at the time of receipt, the customer will be responsible for payment of the original invoice in full.

Claims for any short shipment must be made within thirty (30) days of invoice.

## **International Warranty Clause:**

This warranty reflects U.S. domestic policy. Warranty outside the U.S. may vary by country. Please contact your local Stryker Medical representative for additional information.
