Introduction

INTENDED USE

This manual is designed to assist in the maintenance of Stryker's FL23P Manual MedSurg bed. Read it thoroughly before beginning any service on the bed. Qualified maintenance personnel should be able to refer to this manual at all time when servicing the bed.

This Maintenance manual is an integral part of the bed and should be included if the bed is sold or transferred.

WARNING / CAUTION / NOTE DEFINITION

The words WARNING, CAUTION and NOTE carry special meanings and should be carefully reviewed.

WARNING

Alerts the reader about a situation, which if not avoided, could result in death or serious injury. It may also describe potential serious adverse reactions and safety hazards.

CAUTION

Alerts the reader of a potentially hazardous situation, which if not avoided, may result in minor or moderate injury to the user or patient or damage to the equipment or other property. This includes special care necessary for the safe and effective use of the device and the care necessary to avoid damage to a device that may occur as a result of use or misuse.

Note

This provides special information to make maintenance easier or important instructions clearer.

|----------------|---------|-------------|---------|-------------|---------|-----------|--------|--------|
| | | | | | | | | |

| Listed below are the lubrication points. Lubrication must be done on a yearly basis. |
|---|
| WARNING |
| The use of grease other than the one recommended (OG2) could lead to deterioration of the critical parts and mechanism failure, resulting in injury to the patient and/or user and damage to the bed. |
| <u>↑</u> CAUTION |
| This bed uses oil-impregnated bushings at hinge points. Do not lubricate these bushings. When bushings are found wo replace them. |
| LUBRICATION ANNUAL CHECKLIST |
| Bed Lift Mechanism (see Figure 2.2A on page 11) Lubricate the threads of the two Hi-Lo screws. Grease only the threads the molded nut moves over. Activate the bed lift mechanism to spread the grease evenly. Lubricate the path and the clutch fork on the clutch coupling. |
| Actuator Screws (see Figure 2.2B on page 11) • Lubricate the Fowler and Knee Gatch actuator screws. Refer to page 31 for the lubrication procedure. |
| Hand Cranks (see Figure 2.2C on page 11) Clean and grease the retractable pin joint. |

Cleaning

BED CLEANING

Hand wash all surfaces of the bed with warm water and mild detergent. Wipe the bed clean and DRY THOROUGHLY to avoid build up of cleaning solution. Do not steam clean or hose off the bed. Do not immerse any part of the bed. Some of the internal parts of the bed are electric and may be damaged by exposure to water.

Suggested cleaners for bed surfaces:

- Quaternary Cleaners (active ingredient ammonium chloride).
- Phenolic Cleaners (active ingredient o-phenylphenol).
- Chlorinated Bleach Solution (5.25% less than 1 part bleach to 100 parts water).

Avoid over saturation and ensure the product does not stay wet longer than the chemical manufacturer's guidelines for proper disinfecting.

CAUTION

SOME CLEANING PRODUCTS ARE CORROSIVE IN NATURE AND MAY CAUSE DAMAGE TO THE PRODUCT IF USED IMPROPERLY. If the products described above are used to clean Stryker patient care equipment, measures must be taken to ensure the beds are wiped with a damp cloth soaked in clean water and thoroughly dried following cleaning. Failure to properly rinse and dry the beds will leave a corrosive residue on the surface of the bed, possibly causing premature corrosion of critical components. Failure to follow the above directions when using these types of cleaners may void this product's warranty.

MATTRESS CARE

Inspect the mattress after each use. Discontinue use if any cracks or rips are found in the mattress cover as these openings may allow fluid to enter the mattress.

Quick Reference Replacement Parts List

The parts and accessories listed on this page are all currently available for purchase. Some of the parts identified on the assembly drawing parts in this manual may not be individually available for purchase. Please call Stryker Customer Service USA: 1 800 327-0770 or Canada 1-888-233-6888 for availability and pricing.

| Description | Part Number |

| Red Sticker - Brake | QE71-0511 |
| Brake/Steer Pedal | QP23-0627 |
| Miscellaneous | |
| | DDCAD CCD |
| Grey Spray Paint | DDCAP-GSP |
| Bushing | QDF17-0020 |
| Nylon Cable Tie | QDF9518 |

WARNING

- To prevent injury when working under the bed with the bed in the high position, always place blocks under the Hi-Lo levers and apply the brakes.
- Only qualified maintenance personnel should perform the procedures detailed in this maintenance manual. Failure to observe this restriction can result in serious damage to material and/or severe injury to people.

Note

The words "right" and "left" used in this manual refer to the right and left sides of a patient lying face up on the bed.

TAMPER PROOF OPTION

The bed might be equipped with the tamper proof option to avoid some pieces from being disassembled by other persons than medical or maintenance personnel. If this option is available on the bed, refer to the table below to have the equivalences of the regular tools and pieces in the following pages (Maintenance Procedures).

| Standard Tools | Tamper Proof Option Tools |
|----------------------|---|
| 7/16" Socket | #20 Tamper Proof Socket (1/4" Nut) |
| 1/2" Socket | #30 Tamper Proof Socket (5/16" Nut) |
| 9/16" Socket | #30 Tamper Proof Socket (3/8" Nut) |
| 7/16" Wrench | T-30 Tamper Proof |
| 1/2" Wrench | T-40 Tamper Proof |
| 9/16" Wrench | T-40 Tamper Proof |
| Phillips Screwdriver | T-15, T-25 or T30 Tamper Proof (Depending on the size of the screw) |

Note

Tool Kit FA64235 containing all the tools stated in the table is available for this option when present on the product.

SIDERAIL - RAIL REPLACEMENT

Note

If the bed is equipped with the tamper proof option, refer to the table on page 14.

Required Tools:

- · Small Regular Screwdriver
- · Needle Nose Pliers
- Rubber Mallet
- 7/16" Socket
- 3/8" Drive Ratchet

Procedure:

- 1. Raise the bed to the full upright position and then apply the brakes.
- 2. Position all the mattress support sections to flat.
- 3. Unplug the bed power cord from the power source.
- 4. Raise the siderail needing repair.
- 5. Using a small regular screwdriver and needle nose pliers, remove the two protective caps (A). Be careful while using the tools not to damage the siderail paint.

Note

Replace the caps using a rubber mallet. The removal of the caps may damage them; make sure you have some on hand.

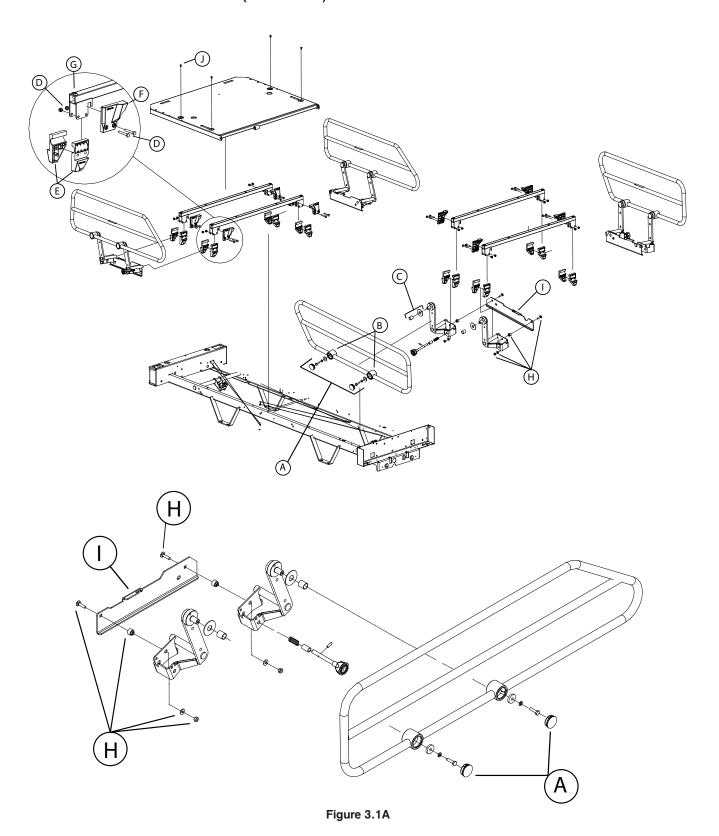

- 6. a. For a head siderail, using the 7/16" socket, remove the nut, spring washer and spacer holding the rail in place.
 - b. For a foot siderail, using the 7/16" socket, remove the nut, the spring washer and the spacer holding the siderail in place (B).

Note

Inspect the self-lubricating bearings for wear and replace them if need be.

- 7. Reverse the above steps to install the replacement rail.
- 8. Verify the siderail movement for proper operation before returning the bed to service.

SIDERAIL - RAIL REPLACEMENT (CONTINUED)

SIDERAIL ASSEMBLY REPLACEMENT

Note

If the bed is equipped with the tamper proof option, refer to the table on page 14.

Required Tools:

- 3/8" Drive Ratchet
- 7/16" Socket
- 7/16" Combination Wrench
- · Diagonal Pliers

Procedure:

Note

Unless otherwise indicated, refer to Figure 3.1A on page 16 for the illustration of the references contained in the following replacement procedure.

- 1. Raise the bed to the full upright position and then apply the brakes.
- 2. Depending on the position of the siderail needing repair, place the mattress support sections as follows:
 - Head Siderail: Raise the fowler fully up.
 - Foot Siderail: Lower completely the fowler. Raise the gatch fully up, then lift and fold back the gatch toward the head end of the bed.
- 3. Raise the siderail needing repair.
- 4. Using a 7/16" socket and 7/16" combination wrench, remove the two locknuts and bolts (D) holding the two half bushings (E), the stopper (F) and the siderail mechanism from their location hold the bushings to prevent them from falling to the ground.

Note

First remove the two locknuts and bolts at one end of the assembly and, while holding the assembly, finish with the ones at the opposite end.

- 5. Reverse the above steps to install the replacement siderail assembly.
- 6. Verify the siderail for proper operation before returning the bed to service.

TRANSFER PLATE REPLACEMENT

Note

If the bed is equipped with the tamper proof option, refer to the table on page 14.

Required Tools:

- · 3/8" Drive Ratchet
- 7/16" Socket
- 7/16" Combination Wrench
- Torque Wrench

Procedure:

Note

Unless otherwise indicated, refer to Figure 3.1A on page 16 for the illustration of the references contained in the following replacement procedure.

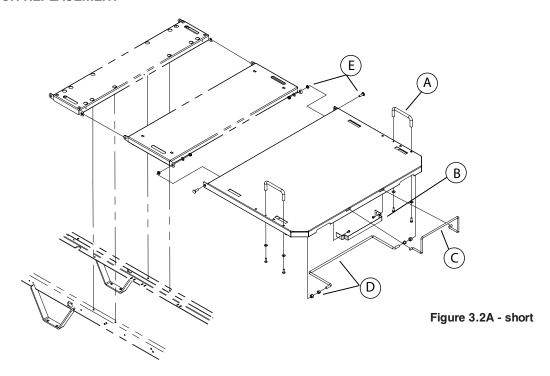

- 1. Raise the bed to the full upright position and then apply the brakes.
- 2. Depending on the type and the position of the siderail, place the mattress support sections as follows:
 - Head Siderail: Raise the fowler to the full upright position.
 - Foot Siderail: Lower completely the fowler. Raise to the full upright position the gatch, then lift and fold back the gatch toward the head end of the bed.
- 3. Lower the siderail needing repair.
- 4. Using a 7/16" socket and 7/16" combination wrench, remove the two locknuts, bushings, washers and bolts (H) holding the transfer plate (I) to the siderail mechanism.

Note

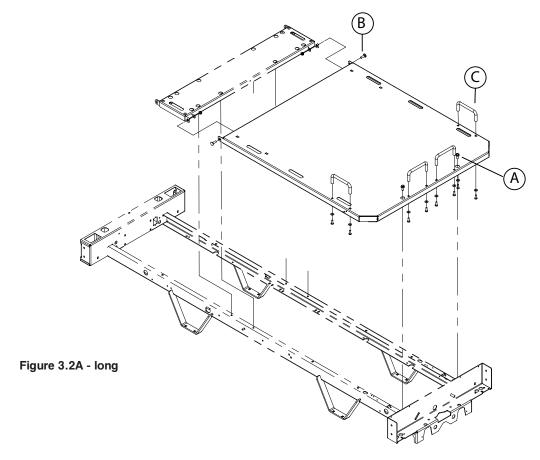

At assembly, tighten the two locknuts to a 75 lb/in torque.

- 5. Reverse the above steps to install the replacement transfer plate.
- 6. Verify the siderail for proper operation before returning the bed to service.

SHORT GATCH REPLACEMENT

LONG GATCH REPLACEMENT

19

SHORT GATCH REPLACEMENT

Note

If the bed is equipped with the tamper proof option, refer to the table on page 14.

Required Tools:

3/8" Drive Ratchet Phillips Screwdriver Bungee Cords

7/16" Socket 1/2" Combination Wrench 9/16" Combination Wrench

Procedure:

- 1. Raise the bed to the full upright position and then apply the brakes. Flatten all sections of the mattress support.
- 2. Lower the siderails.
- 3. Lift and fold back the gatch toward the head end of the bed. Secure the section to the bed using bungee cords.
- 4. Using the Phillips screwdriver, remove the lateral mattress retainers (A).
- 5. Using the Phillips screwdriver, remove the mattress retainer lock (B).
- 6. Remove the foot mattress retainer (C).
- 7. Using the 9/16" wrench, remove the support (D) from the gatch.
- 8. Remove the bungee cords and replace the gatch to horizontal position.
- 9. Using a 1/2" combination wrench, remove the two locknuts, washers, bushings and bolts (E) linking the gatch to the gatch and remove the defective section.
- 10. Reverse the above steps to install the replacement gatch.
- 11. Verify the gatch movement before returning the bed to service.

LONG GATCH REPLACEMENT

Note

If the bed is equipped with the tamper proof option, refer to the table on page 14.

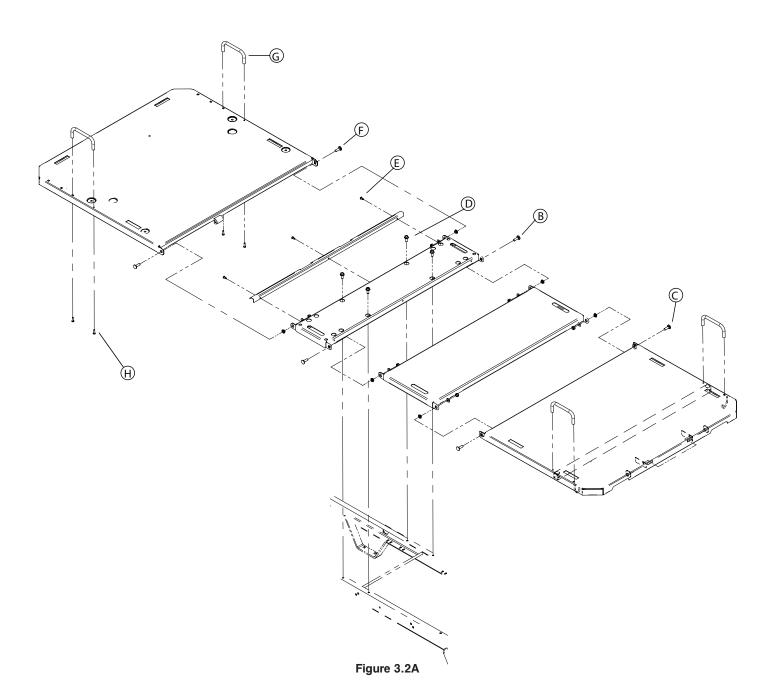

Required Tools:

- · 3/8" Drive Ratchet
- 7/16" and 1/2" Socket
- 1/2" Combination Wrench
- Bungee Cord

Procedure:

- 1. Raise the bed to the full upright position and then apply the brakes. Flatten all sections of the mattress support.
- 2. Lower the siderails.
- 3. Using the 1/2" socket, remove bolts (A).
- 4. Using the 1/2" wrench, remove both nuts, flat washers, and bolts (B) holding the gatch to the center section, remove the defective section.
- 5. Using the Phillips screwdriver, remove the four (4) mattress retainers (C) from the defective litter.
- 6. Reverse the above steps to install the replacement gatch
- 7. Verify the gatch movement before returning the bed to service

72-1065E MM FL23P REV A

MATTRESS SUPPORT - GATCH REPLACEMENT (ONLY WITH SHORT GATCH)

Note

If the bed is equipped with the tamper proof option, refer to the table on page 14.

Required Tools:

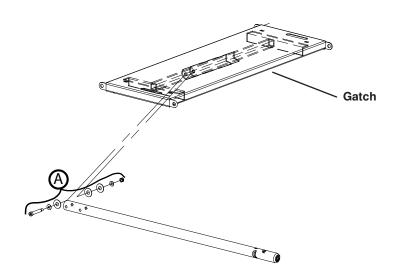

- 5/32" Allen Wrench
- 1/2" Combination Wrench
- Bungee Cords

Procedure:

Note

Unless otherwise indicated, refer to Figure 3.2A on page 21 for the illustration of the references contained in the following procedure.

- 1. Raise the bed to the full upright position and then apply the brakes. Flatten all sections of the mattress support.
- 2. Lower the siderails.
- 3. Using a 1/2" combination wrench, remove the four locknuts, washers, bushings and bolts (B, C) linking the gatch to the foot and seat sections and remove the gatch.
- 4. Using the 1/2" combination wrench and the 5/32" Allen wrench, remove the nut, flat washer and bolt (A) (See Figure below).
- 5. Reverse the above steps to install the replacement gatch.
- 6. Verify the gatch movement before returning the bed to service.

MATTRESS SUPPORT - SEAT SECTION REPLACEMENT

Note

If the bed is equipped with the tamper proof option, refer to the table on page 14.

Required Tools:

- · 3/8" Drive Ratchet
- 1/2" Deep Socket
- 1/2" Combination Wrench
- · Phillips Screwdriver
- · Torque Wrench

Procedure:

Note

Unless otherwise indicated, refer to Figure 3.2A on page 21 for the illustration of the references contained in the following procedure.

- 1. Raise the bed to the full upright position and apply the brakes. Flatten the mattress support.
- 2. Lower the siderails.
- 3. Using a 1/2" deep socket, remove the four bolts (D) holding the seat section to the frame. (see page 21)

Note

Once removed, the self-tapping bolts must be first screwed in manually before tightening them to a 135 lb/in (14.7 Nm) torque using a torque wrench.

- 4. Using a 1/2" combination wrench, remove the four locknuts, washers, bushings and bolts (B, F) linking the seat section to the thigh and fowlers and remove the seat section.
- 5. Turn the seat section up side down and, using a Phillips screwdriver, remove the three screws (E) holding the protective plate to the seat section. Keep the plate for the replacement seat section.
- 6. Reverse the above steps to install the replacement seat section.

MATTRESS SUPPORT - FOWLER REPLACEMENT

Note

If the bed is equipped with the tamper proof option, refer to the table on page 14.

Required Tools:

- · 3/8" Drive Ratchet
- 7/16" Socket
- Phillips Screwdriver
- Strap
- 1/2" Combination Wrench (2)

Procedure:

Note

Unless otherwise indicated, refer to Figure 3.2A on page 21 for the illustration of the references contained in the following procedure.

- 1. Raise the bed to the full upright position and then apply the brakes.
- If the bed is equipped with full-length siderails, lower them.
 If equipped with half-length siderails, raise the head siderails and lower the foot ones.
- 3. Remove the head board.
- 4. Raise the fowler to the full upright position and attach it securely to the bed using a strap.
- 5. Using a Phillips screwdriver, remove the two lateral mattress retainers (G) and keep them for the replacement fowler
- 6. Using two 1/2" combination wrenches, remove the locknut, spacer and bolt (A) holding the upper part of the compression bar to the fowler and lay it down.
- 7. Using two 1/2" combination wrenches, remove the locknut, bushing and bolt (B) linking the mattress support lever to the fowler.
- 8. Remove the strap and manually lower the fowler completely.
- 9. Lower the head siderails, and using a Phillips screwdriver to remove the four screws (J, Figure 3.1A, page 16) holding the two siderail supports to the fowler. Let the supports/siderails assembly rest on the frame.
- 10. Using a 1/2" combination wrench, remove the two locknuts, flat washers, bushings and bolts (F, Figure 3.2A, page 21) linking the fowler to the seat section and remove the defective fowler.
- 11. Reverse the above steps to install the replacement fowler.
- 12. Verify the fowler movement before returning the bed to service.

MATTRESS SUPPORT - FOWLER REPLACEMENT (CONTINUED)

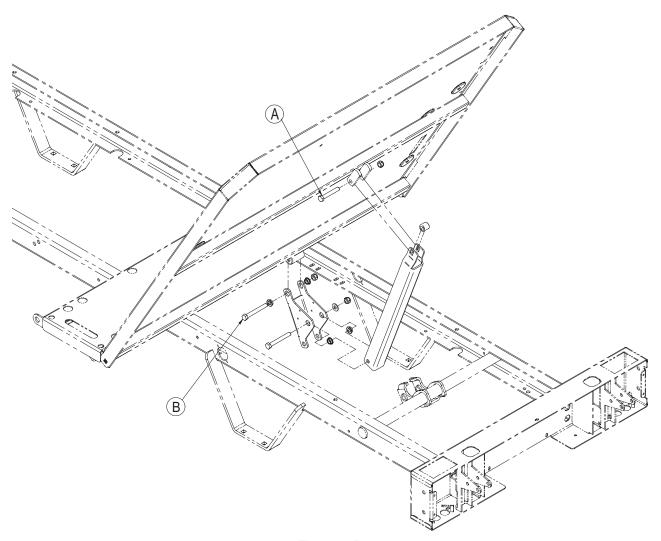

Figure 3.2B

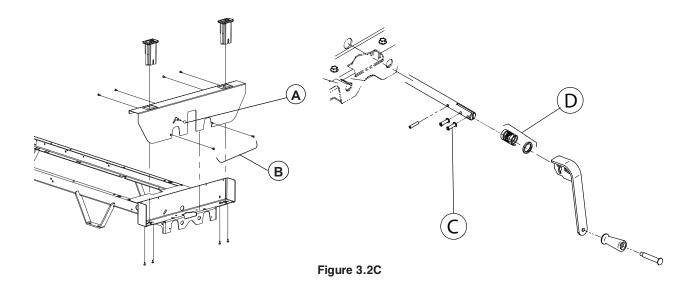

CRANK

Note

If the bed is equipped with the tamper proof option, refer to the table on page 14.

Required Tools:

Vise Grips Drill and 1/4" Drill Bit Rivet Gun
Phillips Screwdriver 3/16" or 1/4" Punch Medium Strength Thread Locker (Purple)
Hammer OG2 Grease

Procedure:

- 1. Raise the bed to the full upright position and then apply the brakes. Remove the foot board.
- 2. Using a pair of Vise Grips, remove the Trendelenburg rod knob (A).

Note

The threads of the rod were coated with a thread locker to prevent the knob from loosening. Be careful not to break the knob when removing it. Apply thread locker to the rod threads before replacing the knob.

- 3. Using a Phillips screwdriver, remove the ten (10) screws (B) holding the foot end casing cover to the frame. Remove the foot end casing cover.
- 4. Support the end of the crank on your knee and mill both rivet heads (C) using a drill and a 1/4" drill bit.
- 5. Punch rivet out using a 3/16" or a 1/4" punch and a hammer. Remove the crank. Leave the nylon washer and the spring (D) in place.
- 6. Lubricate the mobile part of the replacement crank with OG2 grease and place the crank on the shaft.
- 7. Insert two new rivets and lock them in position using a rivet gun.
- 8. Check the operation of the replacement crank before reassembling the parts and returning the bed to service.

FOWLER CRANK SCREW REPLACEMENT

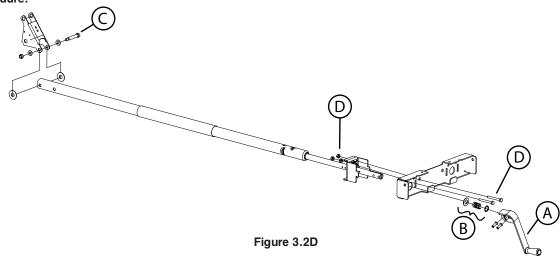

Note

If the bed is equipped with the tamper proof option, refer to the table on page 14.

Required Tools:

Bungee Cords 7/16" Socket 5/32" Allen Wrench
7/16" Combination Wrench 3/8" Drive Ratchet 1/2" Combination Wrench
Phillips Screwdriver

Procedure:

- 1. Raise the bed to the full upright position and then apply the brakes. Remove the foot board.
- 2. Lift the gatch, fold it back toward the head end of the bed and attach it to the bed using bungee cords.
- 3. Using a Phillips screwdriver, remove the 4 screws attaching the foot protective plate to the litter frame.
- 4. Remove the foot end casing cover (see steps 2 and 3 of the "Crank" replacement procedure, page 26).
- 5. Keep the fowler section in horizontal position and support the crank screw tube using a bungee cord passed under it and attached to both sides of the frame.
- 6. Remove the crank (A) (see steps 4 and 5 of the "Crank" replacement procedure, page 26). Keep the two nylon washers and the spring (B).

Note

Remember to replace the washers and the spring on the screw before installing the crank.

- 7. Using the 1/2" wrench and 5/32" Allen wrench, remove the washers, bolt and nut (C) linking the fowler section to the fowler actuator tube.
- 8. Using a 7/16" socket, a ratchet and a 7/16" combination wrench, remove the locknuts, bolts (D) holding the Fowler crank screw assembly to the foot end casing.

FOWLER CRANK SCREW REPLACEMENT (CONTINUED)

Note

Do not over tighten the two nuts (D).

- 10. Lift the bearing support to disengage it from the frame and remove the whole assembly by moving it back toward the head end of the bed.
- 11. Reverse the preceding steps to install the replacement crank screw and proceed as follows to properly adjust it:
 - a. Temporarily install the crank on the screw and turn it to raise the Fowler section then, lower the section until it comes to rest on the frame. The crank should be in a vertical or near vertical position when the Fowler section rests on the frame.
 - b. Install definitely the crank ensuring that the black handle is positioned downward.

Note

The adjustment of the crank screw is correct when the handle is positioned vertically or near vertical when the Fowler section reaches the frame and rests on it.

12. Verify the fowler section by raising and lowering it several times before returning the bed to service.

www.stryker.com

GATCH CRANK SCREW REPLACEMENT

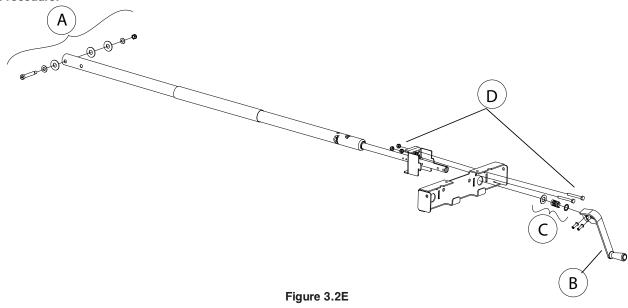

Note

If the bed is equipped with the tamper proof option, refer to the table on page 14.

Required Tools:

Bungee Cords Phillips Screwdriver Needle Nose Pliers 7/16" Combination Wrench 7/16" Socket 3/8" Drive Ratchet

Procedure:

- 1. Raise the bed to the full upright position and then apply the brakes. Remove the foot board.
- 2. Lift the gatch, fold it back toward the head end of the bed and attach it to the bed using a bungee cord. The gatch section must be in horizontal position.
- 3. Using a Phillips screwdriver, remove the 4 screws attaching the foot protective plate to the litter frame.
- 4. Support the crank screw tube using a bungee cord passed under it and attached to both sides of the frame.
- 5. Remove the foot end casing cover (see steps 2 and 3 of the "Crank" replacement procedure, page 26).
- 6. Remove the crank (B) (see steps 4 and 5 of the "Crank" replacement procedure, page 26). Keep the two nylon washers and the spring (C).

Note

Remember to replace the washers and the spring on the screw before installing the crank.

7. Using needle nose pliers, remove the rue ring cotter, washers and clevis pin (A) holding the crank screw tube to the gatch section lever. Disengage the crank screw tube.

GATCH MOTOR REPLACEMENT (CONTINUED)

7. Using the 1/2" wrench and 5/32" Allen wrench, remove the bolt and nut (A) holding the crank screw tube to the gatch section lever. Disengage the crank screw tube.

Note

When replacing the knee gatch actuator, gently turn the tube in either direction to align the tube holes with those of the gatch section lever arms.

8. Using a 7/16" socket, a ratchet and a 7/16" combination wrench, remove the two locknuts and bolts (D) holding the gatch crank screw assembly.

Note

Do not over tighten the two nuts (D).

- 9. Lift the bearing support to disengage it from its location and remove the whole assembly by moving it back toward the head end of the bed.
- 10. Reverse the preceding steps to install the replacement crank screw and proceed as follows to properly adjust it:
 - a. Temporarily install the crank on the screw and turn it to raise the gatch section then, lower the section until it comes to rest on the frame. The crank should be in vertical, or near vertical position when the gatch section rests on the frame.
 - b. Install definitely the crank ensuring that the black nylon handle is positioned downward.

Note

The adjustment of the crank screw is correct when the handle is positioned vertically or near vertical when the gatch section reaches the frame and rests on it.

11. Verify the gatch section by raising and lowering it several times before returning the bed to service.

LUBRICATION OF THE FOWLER AND GATCH CRANK SCREWS

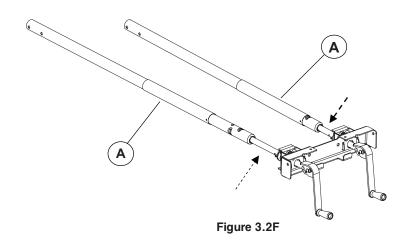

Note

If the bed is equipped with the tamper proof option, refer to the table on page 14.

Required Tools:

- · Phillips Screwdriver
- Bungee Cords
- OG2 Grease
- Grease Brush

Procedure:

- 1. Raise the bed to the full upright position and then apply the brakes.
- 2. Fully raise the fowler section (in this position, the fowler crank screw will reach its maximum extension) and lower the gatch section to flat (in this position, the gatch crank screw will reach its maximum extension).
- 3. Manually fold the gatch back toward the head end of the bed. Secure the position using the bungee cords.
- 4. Using a Phillips screwdriver, remove the screws attaching the foot cover plate to the litter frame.
- 5. Disengage the gray dust tube (A) from the roll pin holding it in place and slide it back to uncover the screw threads.
- 6. Apply grease all over the screw threads with a brush making sure the grease reaches the bottom of the threads. Replace the dust cover and the foot cover plate.
- 7. Remove the bungee cords and replace the gatch to flat position. Run both fowler and gatch sections up and down completely a few times to spread the grease evenly before returning the bed to service.

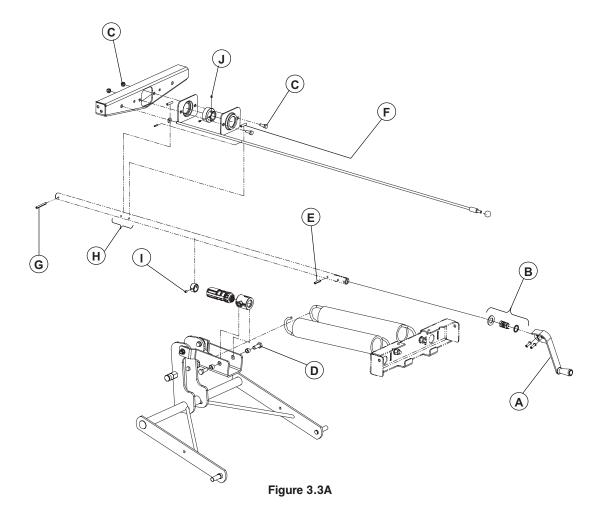

BED LIFT MECHANISM - MOLDED NUT AND/OR FOOT TRANSLATION SCREW REPLACEMENT

Note

If the bed is equipped with the tamper proof option, refer to the table on page 14.

Required Tools:

2 Jack Stands Bungee Cords 1/2" Combination Wrench
Phillips Screwdriver Hammer 9/16" Combination Wrenches (2)
3/8" Drive Ratchet 7/32" Punch 1/8" Allen Key
Rubber Hammer 1/2" Socket Medium Strength Thread Locker (Purple)
1/16" Allen Wrench

Procedure:

- 1. Raise the bed to the full upright position and then apply the brakes. Remove the foot board.
- 2. Fully raise the gatch section. Lift the gatch, fold it back toward the head of the bed and attach it to the bed using bungee cords.
- 3. Using a Phillips screwdriver, remove the 4 screws attaching the foot protective plate to the litter frame.
- 4. Place 2 jack stands under the bed lift levers.
- 5. Lower the bed on the 2 jack stands.

BED LIFT MECHANISM - MOLDED NUT AND/OR FOOT TRANSLATION SCREW REPLACEMENT (CONTINUED)

- 6. Remove the foot end casing cover (see steps 2 and 3 of the "Crank" replacement procedure, page 26).
- 7. Remove the crank (A) (Refer to steps 4 and 5 of the "Crank" replacement procedure, page 26). Keep the two nylon washers and the spring (B).

Note

Remember to replace the washers and the spring on the screw before installing the crank.

- 8. Using a 3/8" socket and a 1/2" combination wrench, remove the two locknuts and bolts (C) holding the bearing supports to the frame.
- 9. Using two 9/16" combination wrenches, remove the two bolts (D) holding the molded screw and its support to the Bed Lift harness.

Note

Apply medium strength thread locker (purple) on the screw and on the set screws before replacing the bearing on the screw and tightening the set screws (J).

- 10. Using a 7/32" punch and a hammer, remove the roll pin (E) from the screw. Remove the foot end screw assembly from its location and lay it on a workbench.
- 11. Remove all the other roll pins (F, G and H).
- 12. Using a 1/16" Allen wrench, loosen the two set screws (I) holding the stop screw and remove it.
- 13. Using a 1/8" Allen wrench, loosen the two set screws (J) holding the bearing in place. Disengage and remove the bearing using a rubber hammer. Thread locker was applied to the screw threads at the assembly line to secure the bearing position.

Note

Apply medium strength thread locker (purple) on the screw and on the set screws before replacing the bearing on the screw and tightening the set screws (J).

- 14. Remove the defective molded nut from the screw. Install the replacement nut on the screw.
- 15. Reverse the preceding steps to install on the screw assembly all its components, except the roll pin (E).
- 16. Reverse the preceding steps to install the replacement screw on the Bed Lift mechanism, as described below:
 - a. Install the roll pin (E).
 - b. Install the crank (A) (see steps 6 and 7 of the "Crank" replacement procedure, page 26).
 - c. Install the foot end casing cover.
 - d. Apply the medium strength thread locker to the rod threads before replacing the knob.
 - e. Install the foot cover plate to the bed frame, screwing in the 4 screws.
- 17. Verify the bed lift proper operation before returning the bed to service.

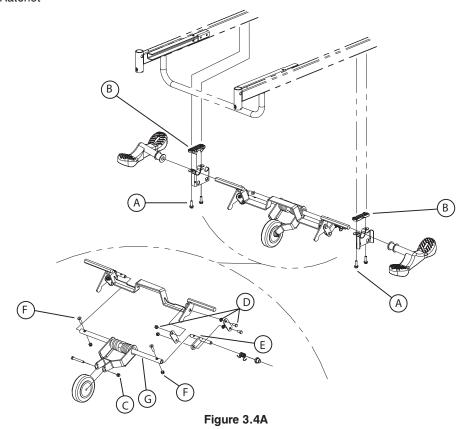

BASE - BRAKE/STEER PEDAL REPLACEMENT

Note

If the bed is equipped with the tamper proof option, refer to the table on page 14.

Required Tools:

- 1/2" Socket
- · Soft Hammer
- · Torque Wrench
- · 3/8" Drive Ratchet

Procedure:

- 1. Raise the bed to the full upright position and apply the brakes.
- 2. Position the brake/steer pedal to neutral.
- 3. Using a 1/2" socket, remove the two bolts (A) holding the fifth wheel support or the lever support (A, Figure 3.4B, page 37) on the side of the defective pedal and lay the support down. Keep the molded spacer (B).

Note

Once removed, the self tapping bolts must be first screwed in manually before tightening them to a 135 in.lbs. (14.7Nm) torque wrench.

- 4. Remove the pedal from the activation lever shaft. Use a soft hammer if necessary.
- 5. Reverse the above steps to install the replacement pedal.

BASE - FIFTH WHEEL CASTER REPLACEMENT (OPTIONAL)

Note

If the bed is equipped with the tamper proof option, refer to the table on page 14.

Required Tools:

• 1/2" Combination Wrenches (2)

Procedure:

Note

Unless otherwise indicated, refer to Figure 3.4A on page 34 for the illustration of the references contained in the following replacement procedure.

- 1. Raise the bed to the full upright position and apply the brakes.
- 2. Position the brake/steer pedal to neutral.
- 3. Using two 1/2" combination wrenches, remove the nut and bolt (C) holding the caster to the swing arm.
- 4. Reverse the above steps to install the replacement caster.

BASE - FIFTH WHEEL ASSEMBLY REPLACEMENT (OPTIONAL)

Required Tools:

- · 1/2" Combination Wrench
- 1/2" Socket
- Soft Hammer
- · 3/8" Drive Ratchet

Procedure:

Note

Unless otherwise indicated, refer to Figure 3.4A on page 34 for the illustration of the references contained in the following procedure.

- 1. Raise the bed to the full upright position and apply the brakes.
- 2. Position the brake/steer pedal to neutral.
- 3. Using a 1/2" socket, remove the two nuts, washers, bushings and bolts (F1, Figure 3.4B, page 37) linking the end of the brake rod to the locking levers, on the side of the pedals. If the optional four-wheel brake system is present on the bed, also remove the fasteners linking the end of the two other brake rods to the same locking levers.
- 4. Using a 1/2" socket, remove the four bolts (A) holding both fifth wheel supports to the base. Keep the molded spacers (B). Remove the assembly.
- 5. Remove the two brake/steer pedals from the activation lever shafts. Use a soft hammer if necessary.
- 6. Remove and keep the two locking levers (C, Figure 3.4B, page 37).
- 7. Reverse the above steps to install the replacement fifth wheel assembly.
- 8. Test the fifth wheel for proper operation before returning the bed to service.

BASE - FIFTH WHEEL SWING ARM ASSEMBLY REPLACEMENT (OPTIONAL)

Note

If the bed is equipped with the tamper proof option, refer to the table on page 14.

Required Tools:

- · 1/2" Socket
- · 1/2" Combination Wrenches (2)
- 3/16" Allen Wrench
- 3/8" Drive Ratchet

Procedure:

Note

Unless otherwise indicated, refer to Figure 3.4A on page 34 for the illustration of the references contained in the following replacement procedure.

- 1. Raise the bed to the full upright position and apply the brakes.
- 2. Position the brake/steer pedal to neutral.
- 3. Using a 1/2" socket, remove the two bolts (A) holding the left or right fifth wheel support to the base. Lay the support down and keep the molded spacer (B).
- 4. Using two 1/2" combination wrenches, remove the nuts, bushings and bolt (D) holding the torsion lever (E) to the lower part of the counter lever.
- 5. Using a 1/2" combination wrench and a 3/16" Allen wrench, remove the two nuts and Allen screws (F) holding the torsion levers (E) to both ends of the torque shaft (G).

Note

At reassembly, screw down the Allen screws before the nuts.

- 6. Disengage the swing arm assembly from the torsion levers and remove it.
- Using two 1/2" combination wrenches, remove the nut and bolt (C) holding the caster to the swing arm and keep it for the replacement swing arm assembly.
- 8. Reverse the above steps to install the replacement swing arm assembly.
- 9. Test the fifth wheel for proper operation before returning the bed to service.

Maintenance Procedures

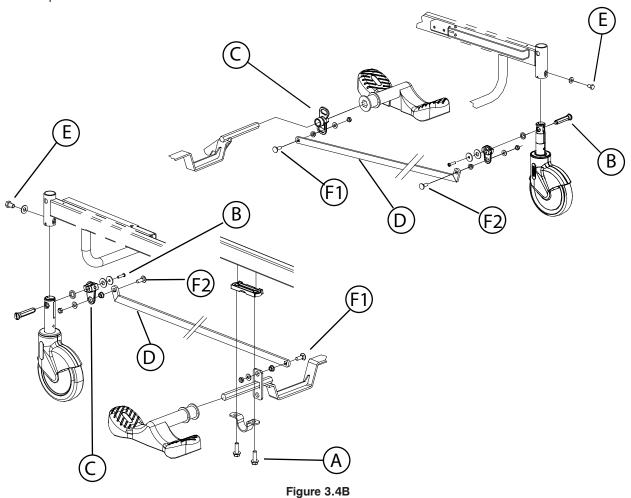

BED CASTER REPLACEMENT

Note

If the bed is equipped with the tamper proof option, refer to the table on page 14.

Required Tools:

- Jack Stand
- 1/2" Combination Wrench
- Phillips Screwdriver

Procedure:

- 1. Raise the bed to the full upright position and apply the brakes.
- 2. Position the brake/steer to neutral.
- 3. Install a jack stand under the frame near the defective caster.
- 4. Lower the bed until the caster is six inches off the ground.
- 5. If the caster is part of the braking mechanism, remove using the Phillips screwdriver, the washers and locking axle (B) linking the caster shaft to the locking lever (C) and the brake rod (D).

Maintenance Procedures

BED CASTER REPLACEMENT (CONTINUED)

Note

The shaft of a caster that is part of the braking mechanism must be properly oriented before mounting it to the base. The opposite illustration shows the side of the shaft that should be facing the inside of the bed: it is the side showing the largest opening below the cam in neutral position.

7. Using a 1/2" combination wrench, remove the bolt and washers (E) holding the caster to the base.

Note

Before tightening the bolt (E), make sure that the caster shaft is completely inserted into the mounting socket.

- 8. Reverse the above steps to install the replacement caster.
- 9. If the replacement caster is part of the brake mechanism, apply the brakes and check that the caster is locked before returning the bed to service.

BRAKE ROD REPLACEMENT

Required Tools:

1/2" Combination Wrench

Procedure:

Note

Unless otherwise indicated, refer to Figure 3.4B on page 37 for the illustration of the references contained in the following replacement procedure.

- 1. Raise the bed to the full upright position and apply the brakes.
- Using a 1/2" combination wrench, remove the nut, bushing, washer and bolt (F1, F2) holding each end of the brake rod.
- 3. Remove the defective rod.
- 4. Reverse the above steps to install the replacement brake rod.
- 5. Test the brakes before returning the bed to service.

Maintenance Procedures

BED CASTER WITH BRAKE MECHANISM REPLACEMENT

Note

If the bed is equipped with the tamper proof option, refer to the table on page 14.

Required Tools:

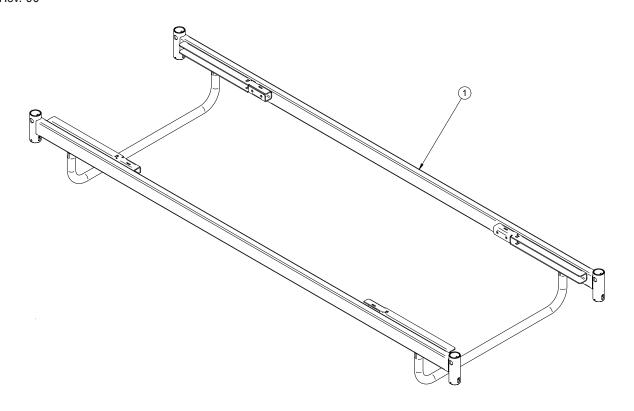

• 1/2" Wrench

Procedure:

- 1. Raise the bed to the full upright position and apply the brakes.
- 2. Position the brake/steer to neutral.
- 3. Install a jack stand under the frame near the defective caster.
- 4. Lower the bed until the caster is six inches off the ground.
- 5. If the caster is part of the braking mechanism, remove using the Phillips screwdriver, the washers and locking axle (B) linking the caster shaft to the locking lever (C) and the brake rod (D).
- 6. Using the 1/2" wrench, remove bolt (A).
- 7. Remove the defective caster.
- 8. Install the new caster on the bed and verify bed's brake functions before sending it back to service.

Optional Full-Length Siderail Protective Pads - DM64176

Warranty

LIMITED WARRANTY

Stryker Medical Division, a division of Stryker Corporation, warrants to the original purchaser the Manual MedSurg Bed Model FL23P to be free from defects in material and workmanship for a period of one (1) year after date of delivery. Stryker's obligation under this warranty is expressly limited to supplying replacement parts and labor for, or replacing, at its option, any product which is, in the sole discretion of Stryker, found to be defective. If requested by Stryker, products or parts for which a warranty claim is made shall be returned prepaid to the factory. Any improper use or any alteration or repair by others in such manner as in Stryker's judgment affects the product materially and adversely shall void this warranty. Any repair of Stryker products using parts not provided or authorized by Stryker shall void this warranty. No employee or representative of Stryker is authorized to change this warranty in any way.

Stryker Medical Bed products are designed for a 15 year expected service life under normal use, conditions, and with appropriate periodic maintenance as described in the maintenance manual for each device. Stryker warrants to the original purchaser that the welds on its Bed products will be free from structural defects for the expected 15 year life of the Bed product as long as the original purchaser owns the product.

This statement constitutes Stryker's entire warranty with respect to the aforesaid equipment. Stryker makes no other warranty or representation, either expressed or implied, except as set forth herein. There is no warranty of merchantability and there are no warranties of fitness for any particular purpose. In no event shall Stryker be liable here under for incidental or consequential damages arising from or in any manner related to sales or use of any such equipment.

TO OBTAIN PARTS AND SERVICE

Stryker products are supported by a nationwide network of dedicated Stryker Field Service Representatives. These representatives are factory trained, available locally, and carry a substantial spare parts inventory to minimize repair time. Simply call your local representative, or call Stryker Customer Service USA at 1-800-327–0770 or Canada at 1-888-233-6888.

SERVICE CONTRACT COVERAGE

Stryker has developed a comprehensive program of service contract options designed to keep your equipment operating at peak performance at the same time it eliminates unexpected costs. We recommend that these programs be activated before the expiration of the new product warranty to eliminate the potential of additional equipment upgrade charges.

A Service Contract helps to:

- · Ensure equipment reliability
- · Stabilize maintenance budgets
- · Diminish downtime
- Establish documentation for JCAHO
- · Increase product life
- · Enhance trade-in value
- Address risk management and safety

Stryker Medical also offers personalized service contracts. Pricing is determined by age, location, model and condition of product.

For more information on our service contracts, please call your local representative.

RETURN AUTHORIZATION

Merchandise cannot be returned without approval from the Stryker Customer Service Department. An authorization number will be provided which must be printed on the returned merchandise. Stryker reserves the right to charge shipping and restocking fees on returned items. **Special, modified, or discontinued items not subject to return.**

DAMAGED MERCHANDISE

ICC Regulations require that claims for damaged merchandise must be made with the carrier within fifteen (15) days of receipt of merchandise. Do not accept damaged shipments unless such damage is noted on the delivery receipt at the time of receipt. Upon prompt notification, Stryker will file a freight claim with the appropriate carrier for damages incurred. Claim will be limited in amount to the actual replacement cost. In the event that this information is not received by Stryker within the fifteen (15) day period following the delivery of the merchandise, or the damage was not noted on the delivery receipt at the time of receipt, the customer will be responsible for payment of the original invoice in full. Claims for any short shipment must be made within thirty (30) days of invoice.

INTERNATIONAL WARRANTY CLAUSE

This warranty reflects U.S. domestic policy. Warranty outside the U.S. may vary by country. Please contact your local Stryker Medical representative for additional information.
